CONCRETE ENCASEMENT DETAIL

No Scale

Concrete encasement of V.C.Pipe at all points where RC.Pipe crosses, as required by the field engineer.

Concrete for manholes shall contain not less than 1.65 bbls. of cement per cubic yard of concrete. In no event shall the total water content exceed 6.25 gallons per sack of cement. The mixture of fine and course aggregate shall be such as will produce a maximum density of the most workable mixture.

IN GENERAL: Pipes will enter and leave the manholes at various angles and elevations. Where possible bend reinf. bars around pipes. (24" diam. or less). Where pipes are large use ⅝ diagonal bars as shown.

The floor of the manhole is to be shaped for flow and drainage with concrete. No deduction in conc. quantities shall be made for pipe openings. No addition in conc. quantities shall be made for shaping manhole floor. An internal vibrator is to be used for placing concrete.
