
NOTES:

Class A Concrete shall be used throughout.

Bevel all exposed edges with a 3/4" triangular chamfer grid. Fillet all corners 3/4" unless otherwise noted.

All dimensions shown relative to reinforcing steel placement are to ℄ of bars unless otherwise noted. All dimensions shown in the bending diagrams are out to out of bars.

See sheet 6 for General Details.

Pile Loading: 20 tons per pile.

* See bar bending diagrams

GENERAL NOTES:

CHANNEL CHANGE & GRADING: The Grading Contractor shall excavate the channel change at bridge site including existing crossing prior to construction of the piers and will construct embankment at abutments to Crown Grade prior to construction of abutments.

BRIDGE EXCAVATION: Elevation 83.0 shall designate the Excavation Boundary Plane, Class I excavation above the plane and Class II below. Bridge excavation quantities shall be computed to a line 1'-6" outside of concrete lines all around.

CONCRETE: Concrete shall be Class A in abutments, piers and handrail and Class AAA in superstructure.

PILES: All piles shall be driven to the penetration shown unless in the opinion of the Engineer such penetration cannot be reached without injury to the piles. All treated timber piles shall be driven to a minimum computed bearing value of 20 tons per pile and all steel piles driven to a minimum computed bearing value of 37 tons per pile.

SOUNDINGS: Soundings shown on this sheet are as taken by borings in the field and represent the best information available to the City of [illegible].

REINFORCING STEEL: All reinforcing steel shall conform to A.S.T.M. Specification A 305-49.

[illegible]

[illegible] Loading H 20-44 AASHO Specifications

[illegible] Stresses: fs = 20,000 p.s.i. reinforcing
fc = 1,200 p.s.i. Class A
fc = 1,600 p.s.i. Class AAA
[illegible] 20 tons per pile, Treated Timber
37 tons per pile, Steel

[illegible] REMENTS: It is the intention of [illegible] specifications that construction [illegible] be in accordance with applicable [illegible] rules and requirements of the [illegible] Commission and that [illegible] to those specifications [illegible] noted.

SUMMARY OF QUANTITIES

Class AAA Concrete	143.2 Cu.Yd.
Concrete Handrail	176.5 Lin.Ft.
Reinforcing Steel	3,090 Lbs.
Structural Steel	90 Lbs.

NOTES:

Class AAA concrete shall be used throughout. Bevel all exposed edges with ¾" triangular wood strips unless otherwise indicated.

Expansion joint materials and copper retainers shall not be paid for directly, but shall be included in the unit price bid for Class AAA concrete.

Design Loading: H 20-44
Unit Stresses: f'c = 1,200 psi
fs = 20,000 psi

Slab interruption joints are optional but if used shall be at locations shown.

Provide "A" post load marker at each span.

See Sheet 6 for handrail details.

SUMMARY OF QUANTITIES	
Class A Concrete	5.6 Cu. Yd.
Reinforcing Steel	1210 Lbs.

NOTES:

All concrete used in the handrail shall be Class A.

Bevel all exposed edges with a ½" triangular molding unless otherwise indicated.

Bid item "Concrete Handrail" shall include all Class A Concrete and reinforcing steel in handrail complete in place, as shown on this sheet.

Concrete Handrail shall be bid on basis of linear feet in place. The Class A Concrete and Reinforcing Steel quantities shown on this sheet are for Contractor's information only.

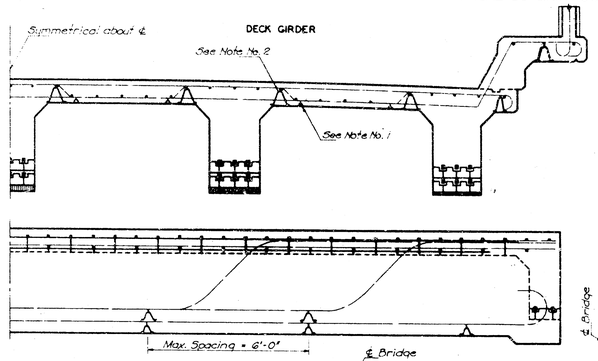
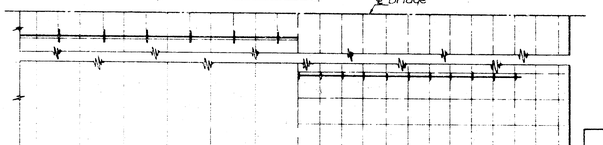
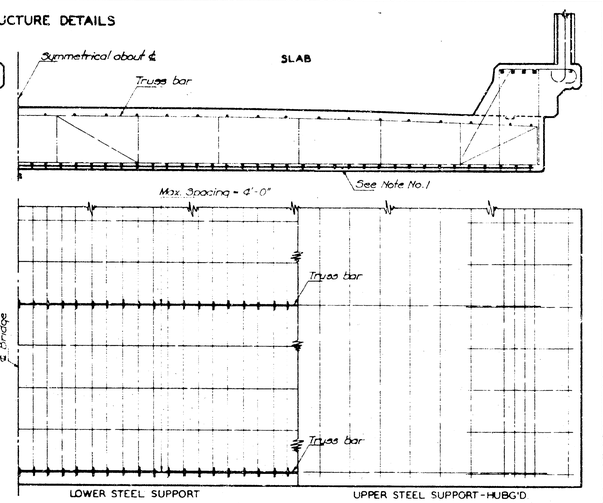
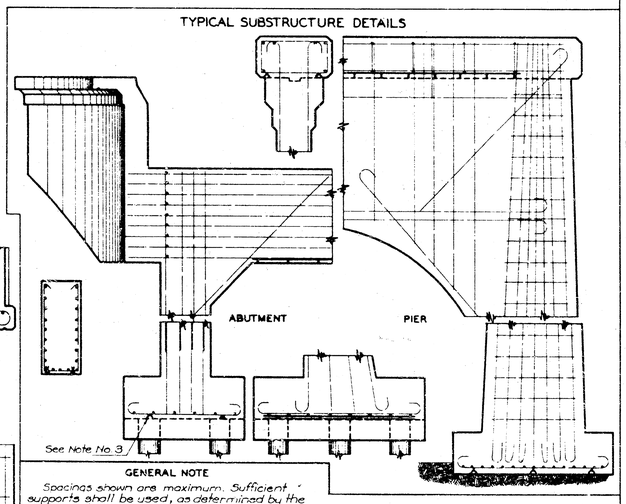
TYPICAL SUPERSTRUCTURE DETAILS









GENERAL NOTE

Spacings shown are maximum. Sufficient supports shall be used, as determined by the Engineer, to retain the reinf. steel in position. Approved designs and arrangements of Supports or Spacers other than as shown on this sheet, may be used with the permission of the Engineer. Component parts of Supports and Spacers shall be securely welded at all contact points. Legs shall be so constructed that only the ends bear upon the forms.

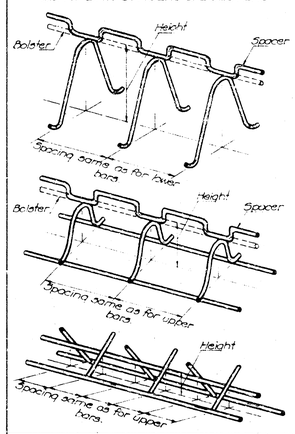
Wire used for Supports and Spacers shall be of sufficient size to insure stability of Reinforcing Steel at the position shown on the Plans, within the limits indicated by Notes 1 & 2. Wire supports shall be supplemented with form ties or other approved devices where necessary.

NOTE 1: The lower side of Reinforcing Steel in these locations shall be not less than one inch (1") from the surface of the concrete.

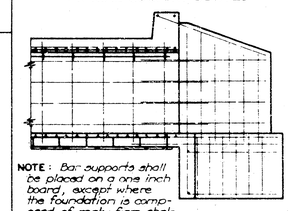
NOTE 2: The upper side of Reinforcing Steel in these locations shall be within the limits shown on the Plans.

NOTE 3: The use of Wire Supports for Reinforcing Steel in these locations is optional. Where they are not used the Steel shall be supported from the forms by means of wire ties or saddles.

BEAM BAR SPACERS & BOLSTERS



TYPICAL CULVERT DETAILS



NOTE: Bar supports shall be placed on a one inch board, except where the foundation is composed of rock, firm shale or a seal course. See Note No. 3.

INDEX OF SHEETS

GRADING NOTES:

Grading Contractor shall excavate the channel to the grade and dimensions indicated placing the excavated materials in road fills at the ends of the bridge, approximately half at each end of the bridge, as directed by the Engineer. Fills are to be built to the cross section shown, extending as far back as possible with the material available from the channel change.

Dirt and rip-rap in the existing walkway crossing are included in the quantities of Common Excavation. The item of Removal of Existing Crossing includes removal of handrails along the walk and the removal of the concrete pipe under the crossing. Contractor shall use reasonable care in removal of pipes and handrail, storing all salvageable material at the site as directed by the Engineer.

Broken concrete and blocks removed from the channel shall be scattered in the toe of the fill only, with particular care taken to avoid pockets of such material in the fill.

All trees, brush, and similar material unsuitable for fill shall be hauled to the city dump for disposal; burning at the site will not be permitted.

Dirt placed in the roadway fill, as described above, shall be compacted as specified for Type B compaction, Kansas State Highway Commission specifications.

GRADING QUANTITIES

ITEM	QUAN.	UNIT
Small Trees Removed	50	Each
Large Trees Removed	33	Each
Common Excavation	5500	Cu. Yds.
Compaction of Earthwork, Type B	5000	Cu. Yds.
