Project Reflection Ridge Commercial
Item Drainage Plan.

Introduction

Reflection Ridge Commercial Addition is located on the northwest corner of Ridge Rd & 21st St. It is a portion of the overall Reflection Ridge project which is generally in the south half of Section 4, T26S, R1W.

At the present time, approximately 85.4 Acres of pasture drains from west to east, discharging into the west ditch of Ridge Road. The proposed conditions indicate that the majority of this drainage area will be intercepted via Phase I streets, storm sewers (now being designed) which will empty into ponds located within the proposed golf course. (See Reflection Ridge Drainage Plan dated 7.31.87).

The reduced area of approximately 24.7 Acres will continue to drain toward Ridge Road as shown on the Reflection Ridge Commercial Drainage Plan.

Date 10.23.87 Page 2 of 4

Project Reflection Ridge Commercial

Item Drainage Plan

I. HYDROLOGY - EXISTING CONDITIONS

Use Rational Formula $Q = CIA$

1. Determine "C"₁₀₀ (Land use = ag. pasture)

Soil Type	Hyd. Group	C ₁₀₀	X
45% Sa	B	0.43	0.1935
15% Ba	C	0.55	0.0825
40% Fa	B	0.43	0.1720

composite "C₁₀₀" = 0.448

2. Determine "I₁₀₀"

Determine to: Overland Flow
 Land Slope = $\frac{1357 - 1327}{2660} = 1.13\%$
 Land Use = short grass pasture
 overland Flow Velocity = 0.30 fps
 1000' overland flow @ 0.30 fps =
 1700' "channelized flow" @ 2fps

55 min
 14
 69 min

I₁₀₀ = 3.45

3. Determine "A"

Planimeter 0.93^{sq} = 85.4 Ac.

4. Determine "Q₁₀₀"

$Q_{100} = C_{100} I_{100} A = 0.448 \times 3.45 \times 85.4 = 132 \text{ cfs}$

II HYDROLOGY - PROPOSED CONDITIONS

Use Rational Method $Q = c IA$

1. Determine "c"

soil type	Hyd. Group	Land Use	C_{100}	%	
Fa	B	Res. 1/4 Ac.	0.61	6	0.0366
Fa	B	Golf Course	0.41	36	0.1476
Fa	B	Commercial	0.90	36	0.3240
Fa	B	Office	0.70	22	0.1540
				<u>100</u>	

composite " C_{100} " = 0.6622

2. Determine " I_{100} "

Determine t_c : overland flow
 200' @ $\approx 1\%$ open space = $200/0.28 \text{ fps} = 11.9$
 1000' channelized flow @ 2fps = $500 \text{ sec} = 8.2$
20.1 min

$I_{100} = 6.53$

3. Determine "A"

Planimeter $107.6 \text{ sq}'' = 1,076,000 \text{ sq}'' = 24.7 \text{ Ac.}$

A. Determine " Q_{100} "

$Q_{100} = C_{100} I_{100} A = 0.6622 \times 6.53 \times 24.7 = 106.8 \text{ cfs}$

Date 10.23.87 Page 4 of 4

Project Reflection Road Commercial

Item Drainage Plan

SUMMARY

	<u>t_c</u>	<u>C_{100}</u>	<u>I_{100}</u>	<u>A</u>	<u>Q_{100}</u>
1. Existing Conditions:	69 min	0.44	3.45	85.4	132 ±
2. Proposed Conditions:	20 min	0.66	6.53	24.7	107 ±

The proposed runoff of 107 cfs will be conveyed to existing streets, streams, etc. via drives, flumes, ditches, private storm water sewers, and/or other approved drainage facilities depending on final development concepts for the subject plat.

		2	5	10	100
<u>Soil Group D</u>					
Slope less than 1%	00	0.28	0.33	0.43	0.63
Slope 1% to 4%	00	0.30	0.35	0.45	0.65
Slope more than 4%	00	0.32	0.37	0.47	0.67

Note No. 1: Coefficients shown in the above table are for pervious open space areas with thick turf which includes pervious areas in parks and cemeteries. Coefficients shown above must be increased 0.02 for use with agricultural pasture areas. Coefficients shown above must be reduced by 0.04 for use with agricultural cultivated areas. Group A soils are well-drained, coarse textured sands with high infiltration rates. Group B soils are moderately well-drained, moderately coarse textured soils with moderate infiltration rates. Group C soils are moderately poor-drained, moderately fine textured soils with slow infiltration rates. Group D soils are poor-drained, fine textured soils with very slow infiltration rates.

GENERAL NOTE: These Rational Formula Coefficients may not be valid for basins 320 acres or larger.
