#### NOTES:

- Excess runoff from the 100-year design storm will be detained and/or retained on site by means of parking lot and raingarden detention, rooftop or underground storage, or porous pavement.
- Parking lot detention will be limited to 8" depth, except that every parking space where 8" depth may be exceeded shall have a post-mounted warning sign at the front of the stall, clearly noting: "WARNING - STORMWATER PONDING AREA".
- Excess runoff will be calculated on the basis of the change in impervious area from the existing land use to the proposed land use as indicated on the final site plan.
- Final drainage system design, including runoff and detention calculations, to be designed under Engineering Division contract for low impact drainage.
- Designated sub-basins to remain as existing conditions.
