I = Included, NA = Non-Applicable, R= Required prior to development
(If "NA" is checked, an explanation must be entered)

	Applicant			Engr	
Tab 1 Project Narrative	**I**	**NA**	**Explanation / Location in Plan**	**I**	**NA**
A Site Location Map, using USGS Map	X				
B Discussion of development, existing conditions, and proposed impacts on stormwater, wetland, riparian, and flood plain	X				
C Discussion of offsite conditions	X				
D Summary of runoff calculations (pre/post development) No increase in peak discharge for all storm series	X				
E Narrative description of the type and function of the permanent best management practices that are incorporated into the site design	X				
F Copy of the plat	X				
G Preliminary grading plan (The final grading plan shall be sealed, signed and dated prior to Engineering receiving the final sanitary sewer plans One plan sheet and PDF shall be submitted to the Subdivision Engineer)	X				
H Professional Engineer seal, signature and date on cover of report	X				
I CD of drainage plan in PDF format (one file) and one paper copy bound with this checklist included behind the cover		X	Upon Approval, pdfs will be submitted on CD		

	Applicant			Engr	
Tab 2 Existing Conditions Runoff Calculations	**I**	**NA**	***Explanation / Location in Plan***	**I**	**NA**
A Copy of applicable orthophoto showing proposed project boundaries (preferable in color)	X				
B Runoff Method (Rational, Hydrograph Method, or other approved methods by Engineering)	X				
C Existing topography (no greater than 2-foot contours, 1-foot recommend)	X				
D Total Site Area and Total Impervious Area (acres)	X				
E Benchmarks used for site control	X				
F Streams, creeks, and waterway labeled	X				
G *Predominant soils from USDA soil surveys, and/or* on site soil borings	X				
H Location and boundaries of natural features such as wetlands, lakes, and ponds with the normal water elevation noted	X				
I Location of existing roads, buildings, parking lots and other impervious areas	X				

Consulting Engineer Initials TK

J Location of existing utilities (e g , water, sewer, gas, electric) and easements	✓				
K Location of existing conveyance systems such as storm drains, inlets, catch basins, channels, swales, and areas of overland flow	✓				
L Flow paths	✓				
M Location and dimensions of existing channels, bridges or culvert crossings	✓				
N Existing conditions hydrologic analysis for runoff rates, volumes and velocities showing methodologies used and supporting calculations (2, 5, 10, 25 & 100 *year, 24-hour storm events) or Critical Duration*	✓				
O Assumed pre-developed runoff curve numbers	✓				
P Existing time of concentrations used in calculations	✓				
Q Evaluate immediate downstream drainage capacity, *not to exceed more than 0 25 miles downstream of* site	✓

A Provide source of flood profile	x				
B Nearest base flood elevations	x				
C Delineation of pre-developed regulatory floodplain/floodway limits		x	No change in limits		
D Delineation of post-developed regulatory floodplain and floodway limits		x	"		
E Floodplain boundary determination per elevation (project limits shown)		x	"		
F Provide source of floodway data table and discharges	x				
G Provide all hydrologic and hydraulic study information for site-specific floodplain studies, unnumbered Zone A area elevation determinations and flood plain map revisions or required permits		x	NA. Zone AE		
H Provide regulatory floodway and four natural profile models (10,50,100, and 500-yr) for existing and future watershed conditions		x	"		
I Location of floodplain/floodway limits and relationship of site to upstream/downstream properties (floodplain limits to be per elevation and scaled location)		x	"		
J Flood plains and floodways located within a Reserve, where necessary	x				

	Applicant			Engr	
Tab 5 Federal, State and Local Permits (to be provided prior to construction unless otherwise specified)	**I/R**	**NA**	**Explanation / Location in Plan**	**I/R**	**NA**
A US Army Corps of Engineers - Regulatory program permits (404 water quality certification)		x	None permitting expected		
B Kansas Department of Agriculture - Division of Water Resources Permits (Stream Obstruction, Channel Change, Flood Plain Fill, Levee, Water Appropriations, Dam safety permit, etc)		x	"		
C Federal Emergency Management Agency (FEMA) Letter of Map Changes (LOMA, LOMR, LOMR-f, CLOMR, etc) Shall be included and approved when project modifies the limits of the floodway		x	"		
D Kansas Department of Transportation		x	"		
E Sedgwick County Right-of-way Permit		x	"		

Consulting Engineer Initials TRK

PROJECT NARRATIVE

EXISTING CONDITIONS

The site is located at the intersection of Hidden Valley Road and Maize Road in west Wichita The site is bounded on the south by Hidden Valley Road, the east by Maize Road, and residential subdivisions to the north and west The Calfskin Creek is located on the south side of Hidden Valley Road

The site consists of approximately 17 acres The majority of the site is open space with an existing building and parking lot (to be removed upon development) The site generally drains to the south and under Hidden Valley Road into the Calfskin Creek

The site has been platted and approved as Lillie Addition The only changes being made to the original 'Lillie Addition Drainage Plan' (July 08, 2005), is the cul-de-sac length has been reduced and lot lines shifted The reserves for the storm water detention ponds have remained

A FEMA Zone AE encroaches the property at the southwest and southeast corners No FEMA Floodway lies on the property as of this report date

PROPOSED CONDITIONS

The site is proposed to be developed into 3 commercial lots with associated streets, utilities and drainage structures The west portion of the site will drain into a proposed pond and then into the Calfskin Creek via an existing 18" CMP The east portion will drain into another proposed pond and outlet into the adjacent 36" storm sewer system

The FEMA Floodplain that encroaches the property will mainly be included in Reserves (locations of proposed ponds) The BFE established by the FIRM Panels will be the basis for minimum pads established on the proposed lots No fill is expected in the area of the mapped floodplain

OFFSITE CONDITIONS

The site generally drains to the south and directly into the Calfskin Creek There are existing CMP's under Hidden Valley Road which convey the runoff from the site into the Calfskin Creek There is a mapped Zone AE FEMA Floodplain which lies on portion of the property The FEMA Floodway lies just to the south of the property and on portions of Hidden Valley Road

There does not appear to be any offsite flow encroaching the property from the adjacent properties

EXISTING CONDITIONS RUNOFF CALCULATIONS

DRAINAGE METHODS & STANDARDS

The following methods and standards, although not a complete list, were used in calculating the existing conditions runoff values

- STORM SERIES
  - SCS Curve Number Method utilized for site runoff
  - 24-hour, 2-yr, 5-yr, 10-yr, 25-yr, 50-yr, 100-yr Storm Events

- SITE FLOW
  - HydraFlow Hydrographs utilized for site runoff
  - Time of Concentration using City of Wichita minimum 15 min

SITE CHARACTERISTICS

The current site is mostly open space with an existing building and parking lot The soil type for this area is Type B, therefore a Curve Number (CN) of 69 was used for open spaces in fair condition The site generally flows to the south and under Hidden Valley Road via an 18" CMP and directly into the Calfskin Creek A portion of the site drains to a storm sewer system in the Maize Road ROW via 2-12" RCPs There is also an 18" RCP and 24" RCP just offsite to the south which conveys runoff to the Calfskin Creek

EXISTING CONDITIONS HYDROLOGIC ANALYSIS

The site produces approximately 92 cfs of runoff in the 100-year storm event This was based on a 15 minute time of concentration (Tc) and a CN or 69 As stated earlier, the majority of the site flows to the south and into the Calfskin Creek There is minimal sheet flow from the surrounding properties that encroaches this site The two (2) 12" RCPs which connect to the 36" storm sewer system will be removed upon construction

DOWNSTREAM DRAINAGE CAPACITY

As stated earlier, the site drains to the south and into the Calfskin Creek This area has historically had flooding problems, therefore, detention has been provided on the site to minimize the runoff to the Creek Portions of the site are in FEMA Zone AE Floodplains and will be located in Reserves

The existing 36" RCP storm sewer system will be utilized upon development The outlet for the proposed east pond will be an 18" RCP and will connect into the storm sewer system This pipe will replace the two 12" RCPs that the site currently utilizes

EXISTING CONDITIONS RUNOFF CALCULATIONS

DRAINAGE METHODS & STANDARDS

The following methods and standards, although not a complete list, were used in calculating the existing conditions runoff values

- STORM SERIES
  - SCS Curve Number Method utilized for site runoff

POST-DEVELOPMENT HYDROLOGIC ANALYSIS

DRAINAGE METHODS & STANDARDS

The following methods and standards, although not a complete list, were used in developing the drainage and grading plans.

- STORM SERIES
  - SCS Curve Number Method utilized
  - 24-hour; 2-yr, 5-yr, 10-yr, 25-yr, 50-yr, 100-yr Storm Events Modeled

- Developed Site Runoff
  - Calculated in HydraFlow Hydrographs
  - Developed CN = 92 (Commercial & Business)
  - Minimum Tc = 15 min

DETENTION FACILITIES

There will be two (2) detention facilities that this site utilizes for storm water detention. The first, located at the southeast corner of the site, will detain the eastern 9 acres of the developed site. The second, located at the southwest corner, will detain the remaining 8.3 acres. These ponds will be referred to as the Southeast pond and the Southwest pond.

- **Southeast Pond**

  The southeast pond will serve the east potion of the proposed property. This pond will have a static water surface of 1311.0. This pond will drain into an existing SWS in the Maize Road ROW. There are currently 2-12" RCPs which connect into this system which will be removed. The outlet for the pond will be an 18" RCP with an overflow weir at elevation 1316.5. The 100-year water surface elevation of the pond is a 1316.4 (with no tailwater applied). The Base Flood Elevation at this location is a 1315.5 NGVD. The overflow weir is not expected to function until the 100-year flood event is achieved. The minimum opening for building pads for this area will be placed at least 2 feet above the highest water surface, in this case, the 100-year water surface of the pond.

- **Southwest Pond**

  The southwest pond will detain the runoff from the western portion of the proposed site. This pond will have a static water surface of a 1313.5. The pond will be located in a FEMA 100-year Floodplain. The pond will drain via a 15" RCP to the south and then into an existing 18" RCP located under Hidden Valley Road. This pipe drains directly into the Calfskin Creek. The pond will also have a 5' overflow weir section at elevation 1316.5. The proposed southwest pond will have a 100-year water surface of a 1317.5 (no tailwater applied). The 100-year water surface elevation of the Calfskin Creek at this location is a 1318.5 NGVD. The lowest opening to structures in this area will be at least 2 feet above the FEMA BFE.

POTENTIAL UPSTREAM/DOWNSTREAM IMPACTS

No potential upstream impacts are expected with this development. The site will detain its runoff in two separate ponds and utilize existing pipes to convey the runoff to the south and into the Calfskin Creek. No rise in the FEMA Base Flood Elevations are expected from this development as little to no fill will be placed in the FEMA SFHA.

DRAINAGE & GRADING PLAN

SOURCE OF FLOODPLAIN INFORMATION

Portions of the site lie within FEMA Zone AE SFHA This means, that a base flood elevation has been determined by detailed study on this reach of the creek This is per FEMA FIRM Panel 340 of 700 for Sedgwick County, Kansas, effective February 2, 2007

The Base Flood Elevation (BFE) varies across the proposed site from 1316-1319 NAVD The minimum pad for lowest openings will be set to give at least a 2' freeboard to these flooding elevations Little to no fill is expected to be placed the 100-year floodplain, therefore no rise or study of the reach is expected For this reason, additional detailed studies were not performed

The FEMA FIRM panel for this area is located in Exhibit 6 The data table and flood profiles are located in the following pages as Exhibits 7 & 8, respectively

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevations (BFEs) and/or floodways have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

FEMA recommends that a Flood Insurance Policy be purchased for structures in areas where levees are shown as providing protection from the 1% annual chance flood. Flooding is not covered by standard property/flashsetting insurance policies nor is it covered by Homeowners Insurance. Renters Insurance. Condominium Owners Insurance, or Commercial Property Insurance. Contact your insurance agent and local floodplain administrator for further information. Visit http://www.fema.gov/business/nfip/index.shtm for information on levees and the risk of flooding in areas shown as being protected by levees.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The projection used in the preparation of this map was Universal Transverse Mercator (UTM) zone 14. The horizontal datum was NAD 83 (CRS80 spheroid). Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

Spatial Reference System Division
National Geodetic Survey, NOAA
Silver Spring Metro Center
1315 East-West Highway
Silver Spring, Maryland 20910
(301) 713-3191

To obtain current elevation, description and/or location information about the bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713- 3242, or visit their website at http://www.ngs.noaa.gov

Base map information shown on this FIRM was provided by Sedgwick County GIS as digital data in Kansas State Plane Coordinate System South at a scale of 1:12,000 from photography dated June 2000.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

This map reflects more detailed up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the FEMA Map Service Center at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and their website at http://www.fema.gov/msc

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov

FEDERAL, STATE, & LOCAL PERMITTING

US ARMY CORPS OF ENGINEERS
There does not appear to any USACOE permitting needed on the site at this time

KANSAS DEPT OF AGRICULTURE – DWR PERMITTING
Little to no fill is expected to be placed in the 100-year Floodplain, therefore, no DWR permitting is expected According to the DWR rules and regulations, an exemption is allowed on floodplain fills where the amount of fill placed is less than 1600 cu yds and is less than 2 feet in height

FEMA
A FEMA Zone AE exists on this property as of April 2, 2007 These areas will be located mainly in reserves, where the proposed ponds will be located No change in the floodplain of floodway is expected, therefore, no permitting will be needed from FEMA on this development

KANSAS DEPT OF TRANSPORTATION
There does not appear to be any KDOT permitting needed on the proposed project

SEDGWICK COUNTY ROW
There does not appear to be any Sedgwick County Permitting on the proposed project
