Dear Mr. Lindebak,

Re: Area of Calfskin Creek
South of Pawnee on 135th St. West

We know that you have been aware of the problems in this area, and it is just one of many that you deal with. Our biggest concern is that with all of the new developments going in around us, that the run-off will create so much additional flood waters that our homes will be under water. I've enclosed pictures taken on September 12, 2008, during that day of heavy rain. I also have a few feet of video shot, which would document time of day. This was the water level after only 5" of rain, without homes & concrete to the north of us & to the east, & eventually, to the west.

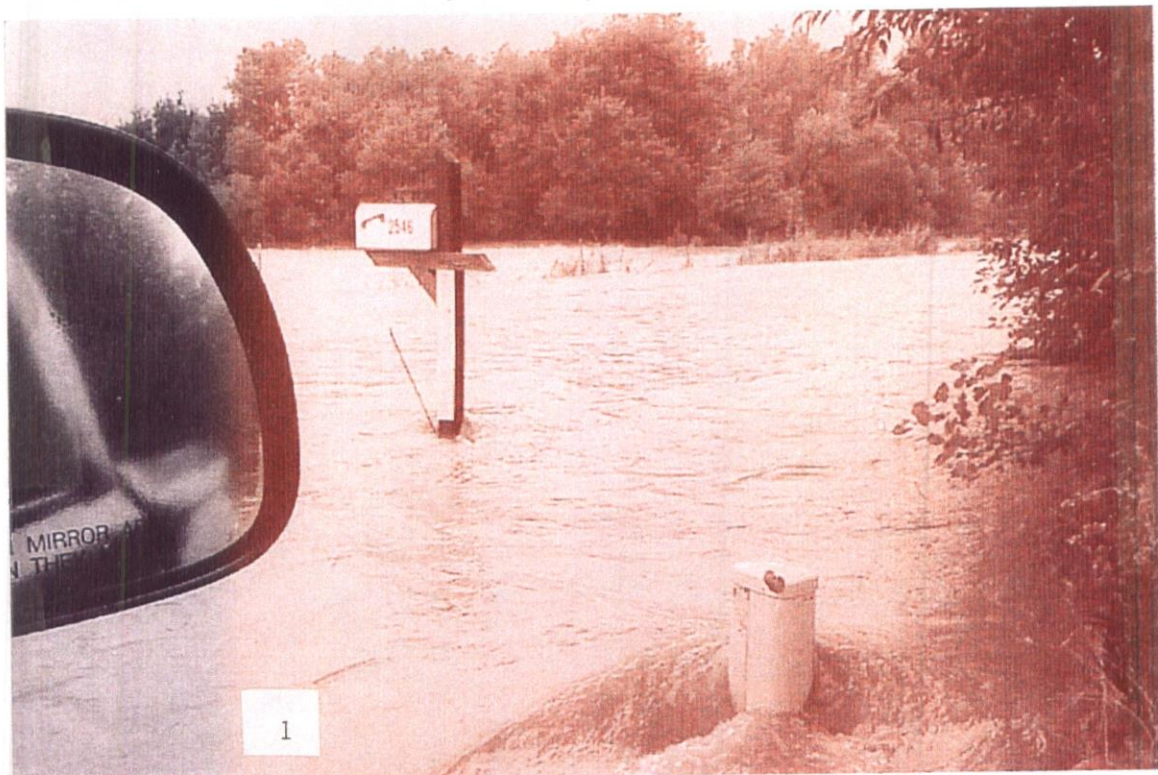

We would like to see adequate collection ponds/lakes included in these developments to retain heavy rains, so as not to dump all into Calfskin, either above or below us. This water isn't going to help out Cowskin flooding either. Clearing the water channels of trees & brush would help water flow.

I know that there are five households on 135th St. South who are in imminent danger of flood if we have more water coming into this creek. We want to encourage people making these plans, to think far enough ahead not to add to the existing problem. Development will happen, but shouldn't be at the expense of those already living in the area.

Please help us to avoid being flooded out.
