

Dear Sirs,

I wanted to let you know and seek your approval for the following improvement to the reserved area located on Landon St (the west drainage) as we discussed previously. I do not foresee any issues as this is only an improvement and no grading is being changed.

Remove existing rock on the bottom and sides of existing drain and replace with 5" concrete bottom with 2 5" wing walls that starts out 17' wide on east end of flume angling down to 7' wide for the last 30' of flume on west end then place keystone interlocking stones on top of wing wall to match existing drainage. Bid also includes 32' of 6" stem wall around top of concrete pipes on east side of flumes

We want to start this private project next week, Feb 14 2011 and be completed by Feb 24, 2011 weather permitting.

Please call me with any issues or questions that you may have.

Best Regards,

 2/10/2011
