Tab O. Checklist

City of Wichita/Sedgwick County
Subdivision Drainage Plan Checklist

Submit completed forms to:
City of Wichita Public Works & Utilities, 455 N. Main 8th Floor, Wichita KS 67202; or
Sedgwick County Stormwater Management, 1144 S. Seneca, Wichita KS 67213.

Project Name:	Fox Ridge Plaza Addition				
Total Area of Project:	48.3 **acres**				
Development Type:	Commercial	**Other:**			
Developer Name:	Hampton Lakes, LLC	**Contact:**	Marv Schellenberg	**Phone:**	(316) 721-2153
Email:	marvs@premierwichita.com				
Engineer Name:	MKEC Engineering Consultants	**Contact:**	Kara Anderson	**Phone:**	(316) 684-9600
Email:	kanderson@mkec.com				

Directions:

(1) Fill-out this checklist completely and include it with the Drainage Plan submittal. This checklist should be included in the bound copy, behind the cover sheet for the submittal. Incomplete Drainage Plans and checklists will not be accepted.

*(2) Indicate whether a plan element is included or not included in the submittal by choosing "**Yes**" or "**No**" from the dropdown list in the **"Element Included?"** column. The question must be answered for every plan element for this checklist to be considered complete. An explanation must be provided for all **"No"** answers.*

Drainage Plan Checklist

#	Plan Element Description	Element Included?	Explanation/Notes
1.0	**General**		
1.1	Digital copy of drainage plan, including preliminary Master Grading Plan, preliminary plat and proposed plat, in PDF format and one half size, bound, paper copy.	Yes	
1.2	Professional Engineer's seal, signature and date on plan cover.	Yes	
1.3	Site location map, using color ortho-imagery and showing the project boundaries, a north arrow and an accurate scale.	Yes	
1.4	Narrative of the development type, existing conditions and proposed impacts on stormwater runoff, wetlands, riparian zones and floodplains/floodways.	Yes	
1.5	Discussion of off-site conditions surrounding the proposed development.	Yes	
1.6	Summary table of runoff calculations (pre/post development).	no	Volumes were calculated
1.7	Narrative description of the type and function of the permanent structural stormwater management facilities.	Yes	
2.0	**Existing Conditions Information**		
2.1	**Existing Conditions Drainage Map**		
2.1.1	On-site and off-site topography: NAVD 88 datum, one-foot contours with spot elevations	Yes	
2.1.2	On-site and off-site drainage features, including perennial and intermittent streams (with names labeled), conveyance systems such as open channels, ditches, swales and areas of overland flow. Flow direction must be indicated by arrows.	Yes	
2.1.3	Storm sewer system components, including storm drains, inlets, catch basins, gutters, manholes, headwalls, pipes and culverts. Material and size must be noted for all pipes and culverts.	Yes	
2.1.4	Location and boundaries of natural features such as wetlands, lakes, ponds with the normal water elevation noted, rock outcroppings, wooded areas and tree rows.	Yes	
2.1.5	Location, dimensions and elevations of existing bridges and culvert crossings.	Yes	
2.1.6	Location of existing utilities (e.g., water, sewer, gas, electric, cable, etc.) with labels and easement boundaries.	Yes	
2.1.7	Groundwater elevations, if applicable.	Yes	
2.1.8	Delineation of predominant soil based on USDA soil surveys and/or on-site soil borings; indicate NRCS soil name and Hydrologic Soil Group for undisturbed surface soils.	Yes	
2.1.9	Land use types per NRCS nomenclature.	Yes	
2.1.10	Footprint of existing impervious areas (labeled, area given in acres).	Yes	
2.1.11	Internal drainage subbasin boundaries used for hydrologic calculations (labeled with ID, total area in acres, impervious area in acres and curve number).	Yes	
2.1.12	Time of concentration flow paths. Indicate and label each segment separately (i.e., overland flow, shallow concentrated, channel1, channel2, etc.). For each segment, provide the appropriate data to calculate Tc (e.g., length, slope, cover type, paved/unpaved, roughness parameters, geometric properties, etc.).	Yes	

Drainage Plan Checklist			
#	Plan Element Description	Element Included?	Explanation/Notes
2.2	**Existing Conditions Hydrology and Hydraulics Analysis**		
2.2.1	Narrative of the hydrologic analysis methodology used (e.g., unit hydrograph or other approved methods).	Yes	
2.2.2	A summary table of drainage subbasin hydrologic parameters (subbasin ID, area in acres, curve number, Tc, etc.).	Yes	
2.2.3	Table of existing condition runoff curve numbers with supporting data and calculations.	Yes	
2.2.4	Table of existing condition times of concentration with supporting data and calculations.	Yes	
2.2.5	A summary table of rainfall data used in the hydrologic analysis, and a reference for the source of the data.	Yes	
2.2.6	Cross-sections and other diagrams of existing open channels, bridge and culvert sections and other hydraulic features as required to illustrate the basis for hydraulic analysis.		N/A
2.2.7	Hydrologic and hydraulic analyses for runoff rates, volumes, velocities and elevations. Provide supporting data not specified above and identify assumptions. Include detailed calculations for the 2, 5, 10, 25 & 100-year, 24-hour storm events. Provide results in a tabular form. Provide digital copies of any computer files and models used.		N/A
3.0	**postdevelopment Conditions Information**		
3.1	**postdevelopment Conditions Drainage Map**		
3.1.1	Proposed project boundary.	Yes	
3.1.2	on-site and off-site topography: NAVD 88 datum, one-foot contours with spot elevations.	Yes	
3.1.3	Existing on-site and off-site drainage features that are to remain after development, including perennial and intermittent streams (with names labeled), conveyance systems such as open channels, ditches, swales and areas of overland flow. Flow direction must be indicated by arrows.	Yes	
3.1.4	Location and description of off-site through-drainage conveyances which are confined to an easement, dedication and/or reserve.	Yes	
3.1.5	Footprint of proposed impervious areas, including roads, parking lots, buildings and other structures.		Not known
3.1.6	Location of proposed utilities (e.g., water, sewer, gas, electric, cable, etc.) with labels and easement boundaries.	Yes	
3.1.7	Delineation of predominant soils, based on anticipated soil textures and NRCS guidelines if different from predevelopment soil conditions; indicate NRCS soil name and Hydrologic Soil Group for surface soils.	Yes	
3.1.8	Land use cover per NRCS nomenclature.	Yes	
3.1.9	Internal drainage subbasin boundaries used for hydrologic calculations (labeled with ID, total area in acres, impervious area in acres and curve number).	Yes	
3.1.10	Proposed limits of land disturbing activity (i.e., grading limits).	Yes	
3.1.11	Time of concentration flow paths. Indicate and label each segment separately (i.e., overland flow, shallow concentrated, channel1, channel2, etc.). For each segment, provide the appropriate data to calculate Tc (e.g., length, slope, cover type, paved/unpaved, roughness parameters, geometric properties, etc.).	Yes	
3.2	**Proposed Conveyances Map**		
3.2.1	on-site and off-site drainage features, including perennial and intermittent streams (with names labeled), proposed conveyance systems (such as open channels, ditches, swales and areas of overland flow, including backyard drainage). Flow direction must be indicated by arrows.	Yes	
3.2.2	Storm sewer system components, including storm drains, inlets, catchbasins, gutters, manholes, headwalls, pipes and culverts. Material and size must be noted for all pipes and culverts.	Yes	
3.2.3	For any subbasin or drainage area > 40 acres, show that the stormwater flow is confined to an open channel with required side benches and freeboard, or conformance to applicable policy and design requirements if partially enclosed.	Yes	
3.2.4	Location(s) of stormwater management facilities and any associated drainage easements.	Yes	
3.2.5	Proposed energy dissipaters and other channel protection devices.	Yes	
3.2.6	Location(s) and dimension(s) of proposed channel, bridge and culvert crossings.	Yes	
3.2.7	Normal pool and 100-year pool elevations for ponds and lakes.	Yes	
3.2.8	Permanent concrete outfall control structure(s) for ponds.	Yes	
3.2.9	Emergency overflow spillways and top of berm elevations for ponds and other volume/peak discharge control facilities.	Yes	
3.2.10	Floodplains, ponds, and stormwater management facilities located in reserves.	Yes	
3.3	**postdevelopment Conditions Hydrology & Hydraulics**		

Drainage Plan Checklist			
#	Plan Element Description	Element Included?	Explanation/Notes
3.3.1	Narrative of the hydrologic analysis methodology used (e.g., unit hydrograph or other approved methods).	Yes	
3.3.2	A summary table of drainage subbasin hydrologic parameters (subbasin ID, area in acres, curve number, Tc, etc.).	Yes	
3.3.3	Table of postdevelopment condition runoff curve numbers with supporting data and calculations.	Yes	
3.3.4	Table of postdevelopment condition times of concentration with supporting data and calculations.	Yes	
3.3.5	Cross-sections and other diagrams of existing open channels, bridge and culvert sections and other hydraulic features as	no	
3.3.6	Hydrologic and hydraulic analyses for runoff rates, volumes, velocities and elevations. Provide supporting data not specified above and identify assumptions. Include detailed calculations for the 2, 5, 10, 25 & 100-year, 24-hour storm events. Provide results in a tabular form. Provide digital copies of any computer files and models used.	Yes	
3.3.7	Downstream peak discharge assessment (10% Rule) results and supporting data and calculations. Provide digital copies of any computer files and models used.	Yes	
3.3.8	Stage-storage-discharge or other outlet rating curves and inflow/outflow hydrographs for all ponds.		Use existing
3.3.9	Demonstrate that the pond contours on the master grading plan and the stage-storage-discharge data are consistent for all ponds.	Yes	
3.3.10	Demonstrate that all ponds have one foot of freeboard above the 100-year, 24-hour high water level.	Yes	
3.3.11	Demonstrate that runoff from the proposed project site is discharged in the same manner as prior to development, using level spreaders, energy dissipaters, other devices or grading as required, or identify an appropriate flowage easement.	Yes	
3.4	**Stormwater Quantity Control Sizing**		
3.4.1	Hydraulic sizing calculations for all stormwater management controls.	Yes	
3.4.2	Table(s) listing all stormwater management controls. Present the types, sizes, elevations, flows, velocities and depths for each control, as applicable. Verify that velocities are self-cleaning and non-erosive.	Yes	
3.4.3	Typical details (including cross-sections where applicable) for outlet structures, embankments, spillways, grade control structures, conveyance channels, etc.	Yes	
3.5	**Stormwater Quality Management Facilities**		
3.5.1	Table(s) listing all stormwater management facilities. Present the description, % TSS removal value, water quality volume handled, contributing drainage area in acres and contributing impervious area in acres.	Yes	
3.5.2	Indicate the responsible party for maintenance, as shown in the plat text (i.e., Home Owners Association, Lot Owners Association, property owner, etc.).	Yes	
3.5.3	Water quality volume (total and by facility), with supporting data and calculations.	Yes	
3.5.4	% TSS removal value (total and by facility) with supporting data and calculation. Must be equal to or greater than 80%.	Yes	
3.5.5	Channel protection volume with supporting data and calculations.	Yes	
3.5.6	Water quality volume and channel protection volume orifice size calculations.	Yes	
3.5.7	Other calculations required for each stormwater management facility as specified in the Wichita/Sedgwick County Stormwater Manual.	Yes	
3.5.8	Typical details (including cross-sections where applicable) for outlet structures, embankments, internal grading, forebays and other siltation prefilters, filtration/infiltration media, vegetation, check dams, operational controls, etc.	Yes	
4.0	**Floodplains**		
4.1	Reference the source of flood profile, floodplain, floodway and stream discharge information.	Yes	
4.2	Delineation of nearest base flood elevations.	Yes	
4.3	Delineation of predevelopment regulatory floodplain/floodway limits using FEMA's current GIS database; limits to be per elevation and scaled location.	no	N/A
4.4	Delineation of postdevelopment regulatory floodplain/floodway limits; limits to be per elevation and scaled location, with project limits shown.	no	N/A
4.5	Floodway data table and discharges.	no	N/A
4.6	Hydrologic and hydraulic study information for local floodplain analysis, unnumbered Zone A elevation determinations and floodplain map revisions or required permits.		N/A
4.7	Regulatory floodway and four natural profile models (10, 50, 100 and 500-year) for existing and postdevelopment conditions.		N/A
4.8	Floodplains and floodways located within a reserve, where necessary.		N/A

Drainage Plan Checklist			
#	Plan Element Description	Element Included?	Explanation/Notes
4.9	Floodplain cut and fill calculations for volume sensitive basins.	Yes	
4.10	Demonstrate that floodway elevations and velocities do not increase due to construction in the floodway ("No Rise Certification").		N/A
5.0	**Federal, State and Local Permits**		
5.1	US Army Corps of Engineers regulatory program permits (Section 404 permit)		N/A
5.2	Kansas Department of Agriculture - Division of Water Resources Permits (Stream Obstruction, Channel Change, Floodplain Fill, Levee, Water Appropriations, Dam Safety permit, etc.).		N/A
5.3	FEMA letters of map change/revision - LOMA, LOMR, LOMR-f, CLOMR, etc.; shall be included and approved when project modifies the limits of the floodplain/floodway.		N/A
6.0	**Half Scale Preliminary Master Grading Plan**		
6.1	One set of plans and associated PDF of plans.	Yes	
6.2	Professional Engineer's seal, signature and date.		
6.3	Title block including subdivision name and phase and dated revision documentation.		
6.4	Future phases shown but cross-hatched as information only.		
6.5	Scale, not greater than 1-inch = 60 feet.		
6.6	North arrow.		
6.7	Index or legend key.		
6.8	Benchmarks (minimum of 2) used for site control (NAVD 88 vertical datum).		
6.9	Existing contours of entire site with contour interval of one foot.		
6.10	Proposed contours for channels, ponds, and other permanent stormwater management facilities, with contour interval of one foot.		
6.11	Spot elevations shown to the nearest tenth of a foot for critical locations, including lot and property boundaries.		
6.12	Proposed lot and street layout.		
6.13	Locations of underground storm drains.		
6.14	Overflow locations for storms exceeding storm drain capacity, with elevations.		
6.15	Top elevations of storm drains at all inlets, manholes, and flow line elevations for all outfalls.		
6.16	Locations of open ditches and lakes.		
6.17	Flow direction arrows.		
6.18	Proposed flow line elevations of all open ditches at maximum 100 foot intervals, and 100-year flood elevations thereon.		
6.19	Ponds: Location, bottom elevation, normal pool elevation, 100-year flood elevation, emergency overflow elevation.		
6.20	Proposed top-of-curb elevations at points where drainage will be required to flow over the curb.		
6.21	Platted minimum building opening elevation for each lot, in table form for all lots (excluding basement floor elevations).		
6.22	Standard foundation and elevation detail for slab on grade, full basement, view-out, partial view-out and/or walk-out construction.		
6.23	Top of foundation elevation for each lot.		
6.24	Notation for builders for each lot as to the type of structure that may be constructed and the view-out, walk-out or pad elevation, as applicable.		
6.25	Indicate that all lots are above the 100-year flood elevation.		
6.26	Indicate that grading around structures conforms to perimeter drainage requirements.		
6.27	Indicate that backyard drainage grading conforms to backyard drainage requirements.		
6.28	Adjacent subdivision lot lines, with lot labels and subdivision names.		
6.29	Boundaries and labels for all easements, rights-of-way and reserves.		
6.30	Statement on proposed final plat: "*A drainage plan has been developed for the subdivision and all drainage easements, rights-of-way, or reserves shall remain at the established grades and remain unobstructed to allow for the conveyance of stormwater.*"		
End of Checklist			

Tab 1. General

Location

The subject property is in the City of Wichita, Sedgwick County, Kansas. The proposed development is on Maize Road between 29th Street North and 37th Street North. The site is the southwest quarter of the northwest quarter of Section 32, Township 26 South, Range 1 West of the 6th P.M. The Stonebridge Commercial Addition borders the site to the north, the Maize School South Campus Addition borders the site to the east, and the Fox Ridge Addition borders the site to the south. The plat area is 48.3 acres. The site is shown on the USGS Map, Appendix 1.1. The site is also shown on the aerial photograph, Appendix 1.2.

Discussion of Project

Existing

The site was previously platted as Maize School South Campus with the area developed with school land usage. The site was included in the drainage report for Maize School South Campus.

The site is adjacent to the Maize School South Campus and Stonebridge Commercial Additions as shown on the preliminary plat, Appendix 1.3. The site is part of the Cadillac Lake Basin and a series of interconnected detention facilities. During an observed rain event on September 12, 2008 that was equal to or greater than a 100-year event, the water surface elevation of Cadillac Lake was observed to be 1351.6. A detention pond has been constructed on the eastern portion of the site. This provides back flow storage capacity for Cadillac Lake and the surrounding areas. This pond is part of the Cadillac Lake Basin and has the 100-year water surface elevation of 1351.6. The pond flows to the south under 34th Street and into a smaller pond. This pond has a riser outlet structure that controls the flow from this site.

Proposed

Development Type

The proposed development is a commercial development with 8 lots. The six lots that front onto Maize Road have areas of 1.0-1.2 acres. The two larger lots are approximately 9.2 acres in size. The basic site is shown on the final plat, Appendix 1.4. Existing dry detention in Reserve A will be modified to fill in a portion and expanded to provide additional detention. The dry pond will also be modified to a wet pond. Existing downstream structures will continue to control this pond and the basin. Compensatory storage will be provided for the volume of existing pond which is proposed to be filled. Detention is also proposed for the remaining school property along 37th Street. This remaining school property is planned for highly dense commercial development.

Preliminary site grading is shown on the Master Grading Plan, Appendix 1.5.

Impacts on Stormwater

A portion of the existing dry detention basin will be filled. The detention basin will be expanded to provide compensatory storage, detention for the proposed development plus 10%, and detention for future development on the remaining school property plus 10%. The pond will also be expanded to include wet detention. The site will be graded to drain to the detention.

Permanent Structural Stormwater Management Facilities

The detention pond will provide detention, water quality, and channel protection for all remaining undeveloped property within the north half of this section.

Offsite

The site is bounded by Maize School South Campus, Stonebridge Commercial, and Fox Ridge Additions. All of these developments are part of Cadillac Lake Drainage Basin and have interconnected detention ponds.

Summary

The site will develop from proposed school usage to proposed commercial usage. The existing dry detention on site will be modified to include a wet pond and provide additional detention. The development of this site and the undeveloped school property along 37th Street will provide an approximately 32 acre-feet of detention. This provides the 23 acre feet required for the development of the site, undeveloped school property along 37th Street, and compensatory storage. The project provides 9 acre feet of storage above what is necessary for the development.

NOTES

1. LOCATION: In the northwest Wichita, lying adjacent to the City of Maize on the West south ¼th of a mile south of the intersection of Maize Road and 37th Street North in a suburban area. The property has access to K-96 via Maize Road, 2 miles north of the plat. Existing surrounding land uses include suburban residential (S), rural residential (SW), commercial (N,NW), public school (E), and agricultural production (W).
2. LOT TOTAL - 8
3. ANNEXATION: Incorporated into Wichita (4-16-2003) / Case A03-09 / Ord. 45-701
4. EXISTING USE: Vacant school property / non-production agricultural
5. ZONING: Existing SF-5 Proposed - LC with CUP DP-330
   This plat is subject to the conditions of Community Unit Plan DP 330.
6. PLAT AREA: Gross - 2,095,019 s.f. or 48.1 Ac.
7. SURVEY DATE: Nov. 11th, 2011 (by MKEC) 2' Contours by LIDAR (City of Wichita)
8. PUBLIC UTILITIES: 20" Water along Maize Road - 10" Sanitary Sewer 1,700 ft east of subject property.
9. LEGAL DESCRIPTION: As described hereon
10. ACCESS CONTROLS: As shown hereon
11. RESERVE: 5. See uses on final plat.
12. FLOOD: According to FEMA FIRM Community Unit Panel 20173C0330E, Effective Date Feb. 2nd, 2007: this property lies within flood zone "X", *"Areas determined to be outside the 0.2 % annual chance floodplain."*
13. DRAINAGE: A drainage report shall accompany this plat.

LEGAL DESCRIPTION

A contiguous tract of land lying within portions of Lots 1 and 2, Block A, and a portion of Reserve B, Maize South School Campus Addition, an addition to Wichita, Sedgwick County, Kansas, said contiguous tract being more particularly described as follow:

BEGINNING at the northwest corner of said Lot 2, thence along the northerly line of said addition, being coincident with the south line of Stonebridge Commercial Addition, an addition to Wichita, Sedgwick County, Kansas, on a Kansas coordinate system of 1983 south zone bearing of N88°12'08"E, 1247.57 feet; thence along the westerly line of said addition, being coincident with the east line of said Stonebridge Commercial Addition, N01°03'47"W, 1242.46 feet to a point lying 80.00 feet south of the north line of said Northwest Quarter, Section 32, Township 26 South, Range 1 West of the Sixth Principal Meridian; thence parallel with and 80.00 feet south of said north line; thence N88°14'57"E, 380.03 feet; thence S01°03'47"E, 1192.40 feet; thence S89°27'12"W, 18.13 feet; thence S50°37'42"W, 82.23 feet; thence S88°12'08"W, 197.37 feet to the east line of said Reserve B; thence along said east line; thence S01°03'47"E, 872.45 feet to a point on a curve to the right, having a radius of 55.00 feet, a central angle of 49°02'45", a chord bearing of S23°27'35"W, and a chord distance of 45.66 feet; thence along the arc of said curve a distance of 47.08 feet to a point on a curve to the left, having a radius of 92.00 feet, a central angle of 66°32'50", a chord bearing of S14°42'33"W, and a chord distance of 100.95 feet; thence along the arc of said curve a distance of 106.86 feet to a point on a curve to the right, having a radius of 55.00 feet, a central angle of 46°10'35", a chord bearing of S04°31'25"W, and a chord distance of 43.14 feet; thence along the arc of said curve a distance of 44.33 feet; thence S27°36'43"W, 23.40 feet to a point on a curve to the right, having a radius of 110.00 feet, a central angle of 77°48'12", a chord bearing of S66°30'49"W, and a chord distance of 138.16 feet; thence along the arc of said curve a distance of 149.37 feet to a point on a curve to the left, having a radius of 340.00 feet, a central angle of 17°15'07", a chord bearing of N83°12'39"W, and a chord distance of 101.99 feet; thence along the arc of said curve a distance of 102.38 feet; thence S01°50'13"E, 138.00 feet to the south line of said Reserve B, said Maize South School Campus Addition; thence along the south lines of said Reserve B and Lot 2, S88°09'47"W, 1030.64 feet to the west line of said addition; thence along said west line for the next two courses, N03°47'54"W, 622.36 feet; thence N00°55'39"W, 626.34 feet to the POINT OF BEGINNING.

CONTAINING: 2,095,019 square feet or 48.1 acres of land, more or less.

FINAL PLAT

FOX RIDGE PLAZA ADDITION

AN ADDITION TO WICHITA, SEDGWICK COUNTY, KANSAS

A replat of a portion of Maize South School Campus Addition

CERTIFICATE OF SURVEY

I, Gregory J. Allison, a registered land surveyor in Kansas, do hereby certify that I have been in responsible charge of surveying and platting of "FOX RIDGE PLAZA ADDITION", an addition to Sedgwick County, Kansas, into a Lots, a Block, Reserves, and a Street, the same being accurately set forth in the accompanying plat and described herein:

A contiguous tract of land lying within portions of Lots 1 and 2, Block A, and a portion of Reserve B, Maize South School Campus Addition, an addition to Wichita, Sedgwick County, Kansas, said contiguous tract being more particularly described as follow:
BEGINNING at the northwest corner of said Lot 2, thence along the northerly line of said addition, being coincident with the south line of Stonebridge Commercial Addition, an addition to Wichita, Sedgwick County, Kansas, on a Kansas coordinate system of 1983 south zone bearing of N88°12'08"E, 1247.57 feet; thence along the westerly line of said addition, being coincident with the east line of said Stonebridge Commercial Addition, N01°03'47"W, 1242.46 feet to a point lying 80.00 feet south of the north line of said Northwest Quarter, Section 32, Township 26 South, Range 1 West of the Sixth Principal Meridian; thence parallel with and 80.00 feet south of said north line; thence N88°14'57"E, 380.03 feet; thence S01°03'47"E, 1192.40 feet; thence S89°27'12"W, 18.13 feet; thence S50°37'42"W, 82.23 feet; thence S88°12'08"W, 197.37 feet to the east line of said Reserve B; thence along said east line; thence S01°03'47"E, 872.45 feet to a point on a curve to the right, having a radius of 55.00 feet, a central angle of 49°02'45", a chord bearing of S23°27'35"W, and a chord distance of 45.66 feet; thence along the arc of said curve a distance of 47.08 feet to a point on a curve to the left, having a radius of 92.00 feet, a central angle of 66°32'50", a chord bearing of S14°42'33"W, and a chord distance of 100.95 feet; thence along the arc of said curve a distance of 106.86 feet to a point on a curve to the right, having a radius of 55.00 feet, a central angle of 46°10'35", a chord bearing of S04°31'25"W, and a chord distance of 43.14 feet; thence along the arc of said curve a distance of 44.33 feet; thence S27°36'43"W, 23.40 feet to a point on a curve to the right, having a radius of 110.00 feet, a central angle of 77°48'12", a chord bearing of S66°30'49"W, and a chord distance of 138.16 feet; thence along the arc of said curve a distance of 149.37 feet to a point on a curve to the left, having a radius of 340.00 feet, a central angle of 17°15'07", a chord bearing of N83°12'39"W, and a chord distance of 101.99 feet; thence along the arc of said curve a distance of 102.38 feet; thence S01°50'13"E, 138.00 feet to the south line of said Reserve B, said Maize South School Campus Addition; thence along the south lines of said Reserve B and Lot 2, S88°09'47"W, 1030.64 feet to the west line of said addition; thence along said west line for the next two courses, N03°47'54"W, 622.36 feet; thence N00°55'39"W, 626.34 feet to the POINT OF BEGINNING.

CONTAINING: 2,095,019 square feet or 48.1 acres of land, more or less.

All easements, right-of-ways, building setbacks, and access controls, together with all other public dedications within the above described property, are hereby vacated and replatted by virtue of K.S.A. 12-512b.

I hereby certify that the details of this plat are correct to the best of my knowledge and belief this ___day of ____________, 2014.

Gregory J. Allison, PE, LS #1257
MKEC Engineering Consultants, Inc.
411 North Webb Road
Wichita, Kansas 67206

OWNER'S CERTIFICATE

Know all men by these presents that the undersigned property owner of the land above set forth in the Registered Land Surveyor's Certificate, has caused the same to be surveyed and platted into a Lots, a Block, Reserves, and a Street the same to be known as "FOX RIDGE PLAZA ADDITION," an addition to Wichita, Sedgwick County, Kansas.

Easements for the construction and maintenance of public utilities and drainage, as indicated on the accompanying plat are hereby granted to the public. The non-exclusive landscape easements are hereby granted to the undersigned owner and their successor's and assigns.

The streets are hereby dedicated to and for the use of the public.

All abutters rights of access to or from Maize Road over and across the west line of "FOX RIDGE PLAZA ADDITION," are hereby granted to the appropriate governing body, as indicated hereon.

Reserve "A" is platted for floodway, drainage, (walls, landscaping, irrigation, and berming within the east and southmost 15 feet thereof), and utilities confined by easement(s) or rights-of-way . Reserve "B", is platted for landscaping, irrigation, berming, screening measures, walls, and utilities confined by easement(s) or rights-of-way. Reserves "C", "D", & "E" are platted for wayfinding signs, landscaping, irrigation, berming, and utilities confined by easement(s) or rights-of-way. The Reserves shall be owned and maintained by the owner(s) of Lots 1, 2, 3, 4, 5, 6, 7, and 8, Block 1, and/or their successors, assigns, and/or a Lot Owner's Association.

A drainage plan has been developed for this plat. All drainage easements, right-of-way, or reserves shall remain at established grades or as modified with the approval of the applicable City or County Engineer, and unobstructed to allow for the conveyance of stormwater.

This plat is subject to the conditions of Community Unit Plan DP 330.

1 OF 1

Tab 2. Existing Conditions

Datum

The site is shown in NAVD 88 datum. All elevations from previous reports have been converted to NAVD 88. The Fox Ridge Addition used City of Wichita Datum (NAVD 88 = COW + 1187.9'). The Stonebridge Commercial Addition used NGVD 29 Datum (NAVD 88 = NGVD 29 Datum + 0.5').

Drainage Patterns

The site is extremely flat with an elevation of 1352 for most of the western portion of the site. Along the east side of the site is a dry detention pond with a top of bank of approximately 1352 and a bottom of 1347. The pond drains to the south under 34th Street through 3-26" RCP's, into an existing pond on Maize School South Campus Addition and then through a riser structure and an 18" RCP to the south into Fox Ridge Addition. The riser structure controls the normal pool elevation at 1347.5 and provides channel protection and water quality. Lager storms overflow through the larger spillway pipe. The existing conditions are shown on the Existing Conditions Drainage Map, Appendix 2.1.

The detention ponds on Fox Ridge Plaza, Maize Campus South, and Fox Ridge Additions are all part of the interconnected Cadillac Lake Basin. During an observed rain event on September 12, 2008 that was greater than a 100-year event, the water surface elevation of Cadillac Lake which back flowed into these ponds at an observed elevation of 1351.6. A detention pond has been constructed on the eastern portion of the site. This pond is part of Cadillac Lake and has the 100-year water surface elevation of 1351.6.

Groundwater Elevations

According to the Kansas Geological Survey Water Well Records (http://www.kgs.ku.edu/Magellan/WaterWell/index.html) there is an existing domestic water well on site with a static water level approximately 25' below existing ground.

Utilities

Water

An existing 20" water line runs along the east side of Maize Road. A water line also crosses the site from north to south on the east side of the existing detention.

Sanitary Sewer

An existing sanitary sewer line flows along the south edge of Maize School South Campus Addition.

Stormwater

An existing roadside ditch conveys flows from north to south along Maize Road. The site drains to existing 3-36" RCP's under 34th Street.

Others

There are no other existing utilities on site.

Hydrologic Analysis

This site was included in previous reports for the Maize School South Campus as prepared by KE Miller dated October 2007. In that report the area is included as Basin A2 under developed school conditions on the Drainage Plan, Appendix 2.2. This basin was modeled using the Rational Method. The Rational C values were increased from 0.51 to 0.58 in the 100-year design storm to represent school use in that report, as indicated on the exhibit from the KE Miller Report.

For this report, due to the complexity of the Cadillac Lake drainage basin, the site was modeled as a single basin to estimate runoff in this report. Calculations for this report use the NRCS Curve Number method in Hydraflow Hydrographs, Appendix 2.3.

Table 2.1. Rainfall Depths for 24-Hour Design Storms

Location	Design Storm Rainfall Depth (in)							
	1-Yr	2-Yr	5-Yr	10-Yr	25-Yr	50-Yr	100-Yr	500-Yr
Sedgwick County	2.8	3.5	4.5	5.2	6.1	6.9	7.8	9.4

Soil Type

- Blanket Silt Loam, 0 to 1 percent slopes, HSG "C"
- Waurika Silt Loam, 0 to 1 percent slopes, HSG "D"

The HSG used to select curve numbers is HSG "D." The site is shown on the soil survey, Appendix 2.4.

Land Use, Impervious Area, and Curve Number

The site is currently undeveloped land with natural grass covering the site. It was planned for school use with 40% impervious in the KE Miller Report dated October 2007. The SCS curve number was calculated as 92.0 to represent the school land use from the KE Miller Report, Appendix 2.5.

Time of Concentration

The time of concentration was calculated using to be 31.1 minutes by assuming that the site is unpaved and draining to the existing detention pond, Appendix 2.6.

Basin Summary

Since the property is part of Cadillac Lake Basin, the flows from the site are controlled offsite by Cadillac Lake. The site currently provides storage for Cadillac Lake. Any area below 1351.6 in elevation will need to be replaced. Additional detention needs to be provided to accommodate development. In the Cadillac Lake Basin, each project that develops is required to provide an additional 10% of storage above what is required for typical development.

Appendix 2.6 - Time of Concentration Calculations

Tab 3. Proposed Conditions

Datum

The site is shown in NAVD 88 datum.

Drainage Patterns

The proposed site will drain from west to east into an existing detention pond east of the site. The site includes approximately 26 acres of commercial development. The remaining platted area will be used as reserves for detention. The western boundary of the existing detention will be filled in to accommodate the site plan. This will reduce the existing detention volume by approximately 10 acre-feet. The existing detention pond will be expanded to the northeast to compensate for the additional fill and development.

In addition to the planned development, the remaining undeveloped school property along 37th Street is being considered in this analysis as a fully developed dense commercial property to provide flexibility as this property develops. This school property along 37th Street is approximately 34 acres in size and drains from east to west into the proposed expansion of the detention pond.

The proposed conditions are shown on the Proposed Conditions Drainage Map, Appendix 3.1.

Groundwater Elevations

According to the Kansas Geological Survey Water Well Records (http://www.kgs.ku.edu/Magellan/WaterWell/index.html) there is an existing domestic water well on site with a static water level approximately 25' below existing ground.

Utilities

Water

The existing 16" water line along Maize Road will provide service to all lots. Proposed utilities are shown on the Drainage and Utility Plan, Appendix 3.2.

Sanitary Sewer

A proposed sewer line will cross 34th Street to the south of the property and then to the east to connect with the existing sewer line on the Maize School South Campus. Sanitary sewer will be constructed on the east side of Lots 1-6 to provide service to all lots.

Stormwater

Proposed stormwater sewer systems will convey runoff from the west portion of the site to the detention pond. Proposed storm water sewer will be modeled and sizes will be determined in the future. The pond will be excavated to provide detention volume and fill material to elevate the site. This will create a wet pond for water quality purposes.

Hydrologic Analysis

This site was included in the previous report for the Maize School South Campus by KE Miller dated October 2007 under developed school conditions. This basin was modeled using the Rational Method in that report. Calculations for this report use the NRCS Curve Number method. The Fox Ridge Plaza Addition and the undeveloped school property along 37th Street development were both modeled as single basins to determine a 100-year peak flow rate.

Table 2.1. Rainfall Depths for 24-Hour Design Storms

Location	Design Storm Rainfall Depth (in)							
	1-Yr	2-Yr	5-Yr	10-Yr	25-Yr	50-Yr	100-Yr	500-Yr
Sedgwick County	2.8	3.5	4.5	5.2	6.1	6.9	7.8	9.4

Soil Type

- Blanket Silt Loam, 0 to 1 percent slopes, HSG "C"
- Waurika Silt Loam, 0 to 1 percent slopes, HSG "D"

The HSG used to select curve numbers is HSG "D." The site is shown on the soil survey, Appendix 2.2.

Land Use, Impervious Area, and Curve Number

The land use of the site will be commercial development. The site will have 8 lots; 6 small lots along Maize Road and 2 larger lots. Final site layouts have not been determined at this time. The site will be approximately 85% impervious. The curve number was calculated to be 96.5, Appendix 2.3.

Time of Concentration

The time of concentration was calculated to be 8.3 minutes by assuming that the site is paved and draining to the existing detention pond, Appendix 2.4.

Basin Summary

The site was modeled as one basin. The pre-project and post-project flows were calculated and 4.5 acre-feet of detention is needed to reduce the post-project to the pre-project flow rate. Because this site is in the Cadillac Lake basin, an extra 10% of detention was added to the detention needed to maintain the peak flow rate. Therefore, the detention required for the development of this site is 5.0 acre-feet. In addition to this site, additional calculations were done for the remaining undeveloped school property along 37th Street to determine that future development will need 7.2 acre-feet for development and 7.9 acre-feet to provide an additional 10% of storage. The proposed basin is estimated to provide 29 acre-feet of storage which accounts for the 24 acre-feet of compensatory storage, development storage, and storage for the undeveloped school property along 37th Street. The basin is estimated to provide 5 acre-feet more detention than required for the development. It is estimated that an additional 45 acre-feet of volume will be excavated below the normal pool of the south pond. This detention volume could potential double depending on final grading of the site. The ponds will be sloped to drain at 0.5% with a v-bottom if the pond is dry. A summary of the detention volumes is shown in Table 3.1. Final Calculations will be provided at the time of construction plan design.

It is recommended that the reserve area be dedicated to the City of Wichita as a drainage dedication because of the overall public benefit now and in the future.

Table 3.1. Detention Summary

Description	Storage (ac-ft)
Fox Ridge Plaza Development	5
Fox Ridge Plaza Compensatory	11
Undeveloped School Property on 37th Street as Commercial	8
Detention Volume Required	24
Proposed Detention Volume	29
Additional Detention Provided	5
Potential Detention Below Normal Pool at South Pond	45

Drainage Feature Summary

The detention pond on site will continue to be interconnected with Cadillac Lake. The 100-year water surface elevation of 1351.6 for Cadillac Lake will also be the 100-yer water surface elevation of the detention on site. The detention pond will have a peak water surface elevation caused by the local flooding draining to the pond. This will recede and when the peak elevation of Cadillac Lake Basin occurs, water will back up into the detention area and the water surface elevation will rise again.

Downstream Peak Discharge Assessment (10% Rule)

The location for the downstream peak discharge assessment for Fox Ridge Plaza Addition is Cadillac Lake. Cadillac Lake has a drainage area of approximately 2200 acres, Appendix 3.3. Since the site and the undeveloped school property along 37th Street combined are approximately 60 acres, the development and undeveloped school property along 37th Street are less than 3% of the drainage basin to Cadillac Lake.

Stormwater Quality Management

The water quality volume required for the Fox Ridge Plaza Addition was calculated to be 2.2 acre-feet, Appendix 3.4. The water quality volume was also calculated to be 2.9 acre-feet for the future commercial development. The total water quality needed for both sites is 5.1 acre-feet. The existing dry detention pond will be excavated to a wet pond. A wet pond will remove 80% of the Total Suspended Solids (TSS). This wet pond will provide a minimum of 2.6 acre-feet of water quality volume below the normal pool elevation and the remaining 2.6 acre-feet of water quality volume above the normal pool elevation. The proposed detention pond will provide the water quality volume required for this site and also the future development east of the site.

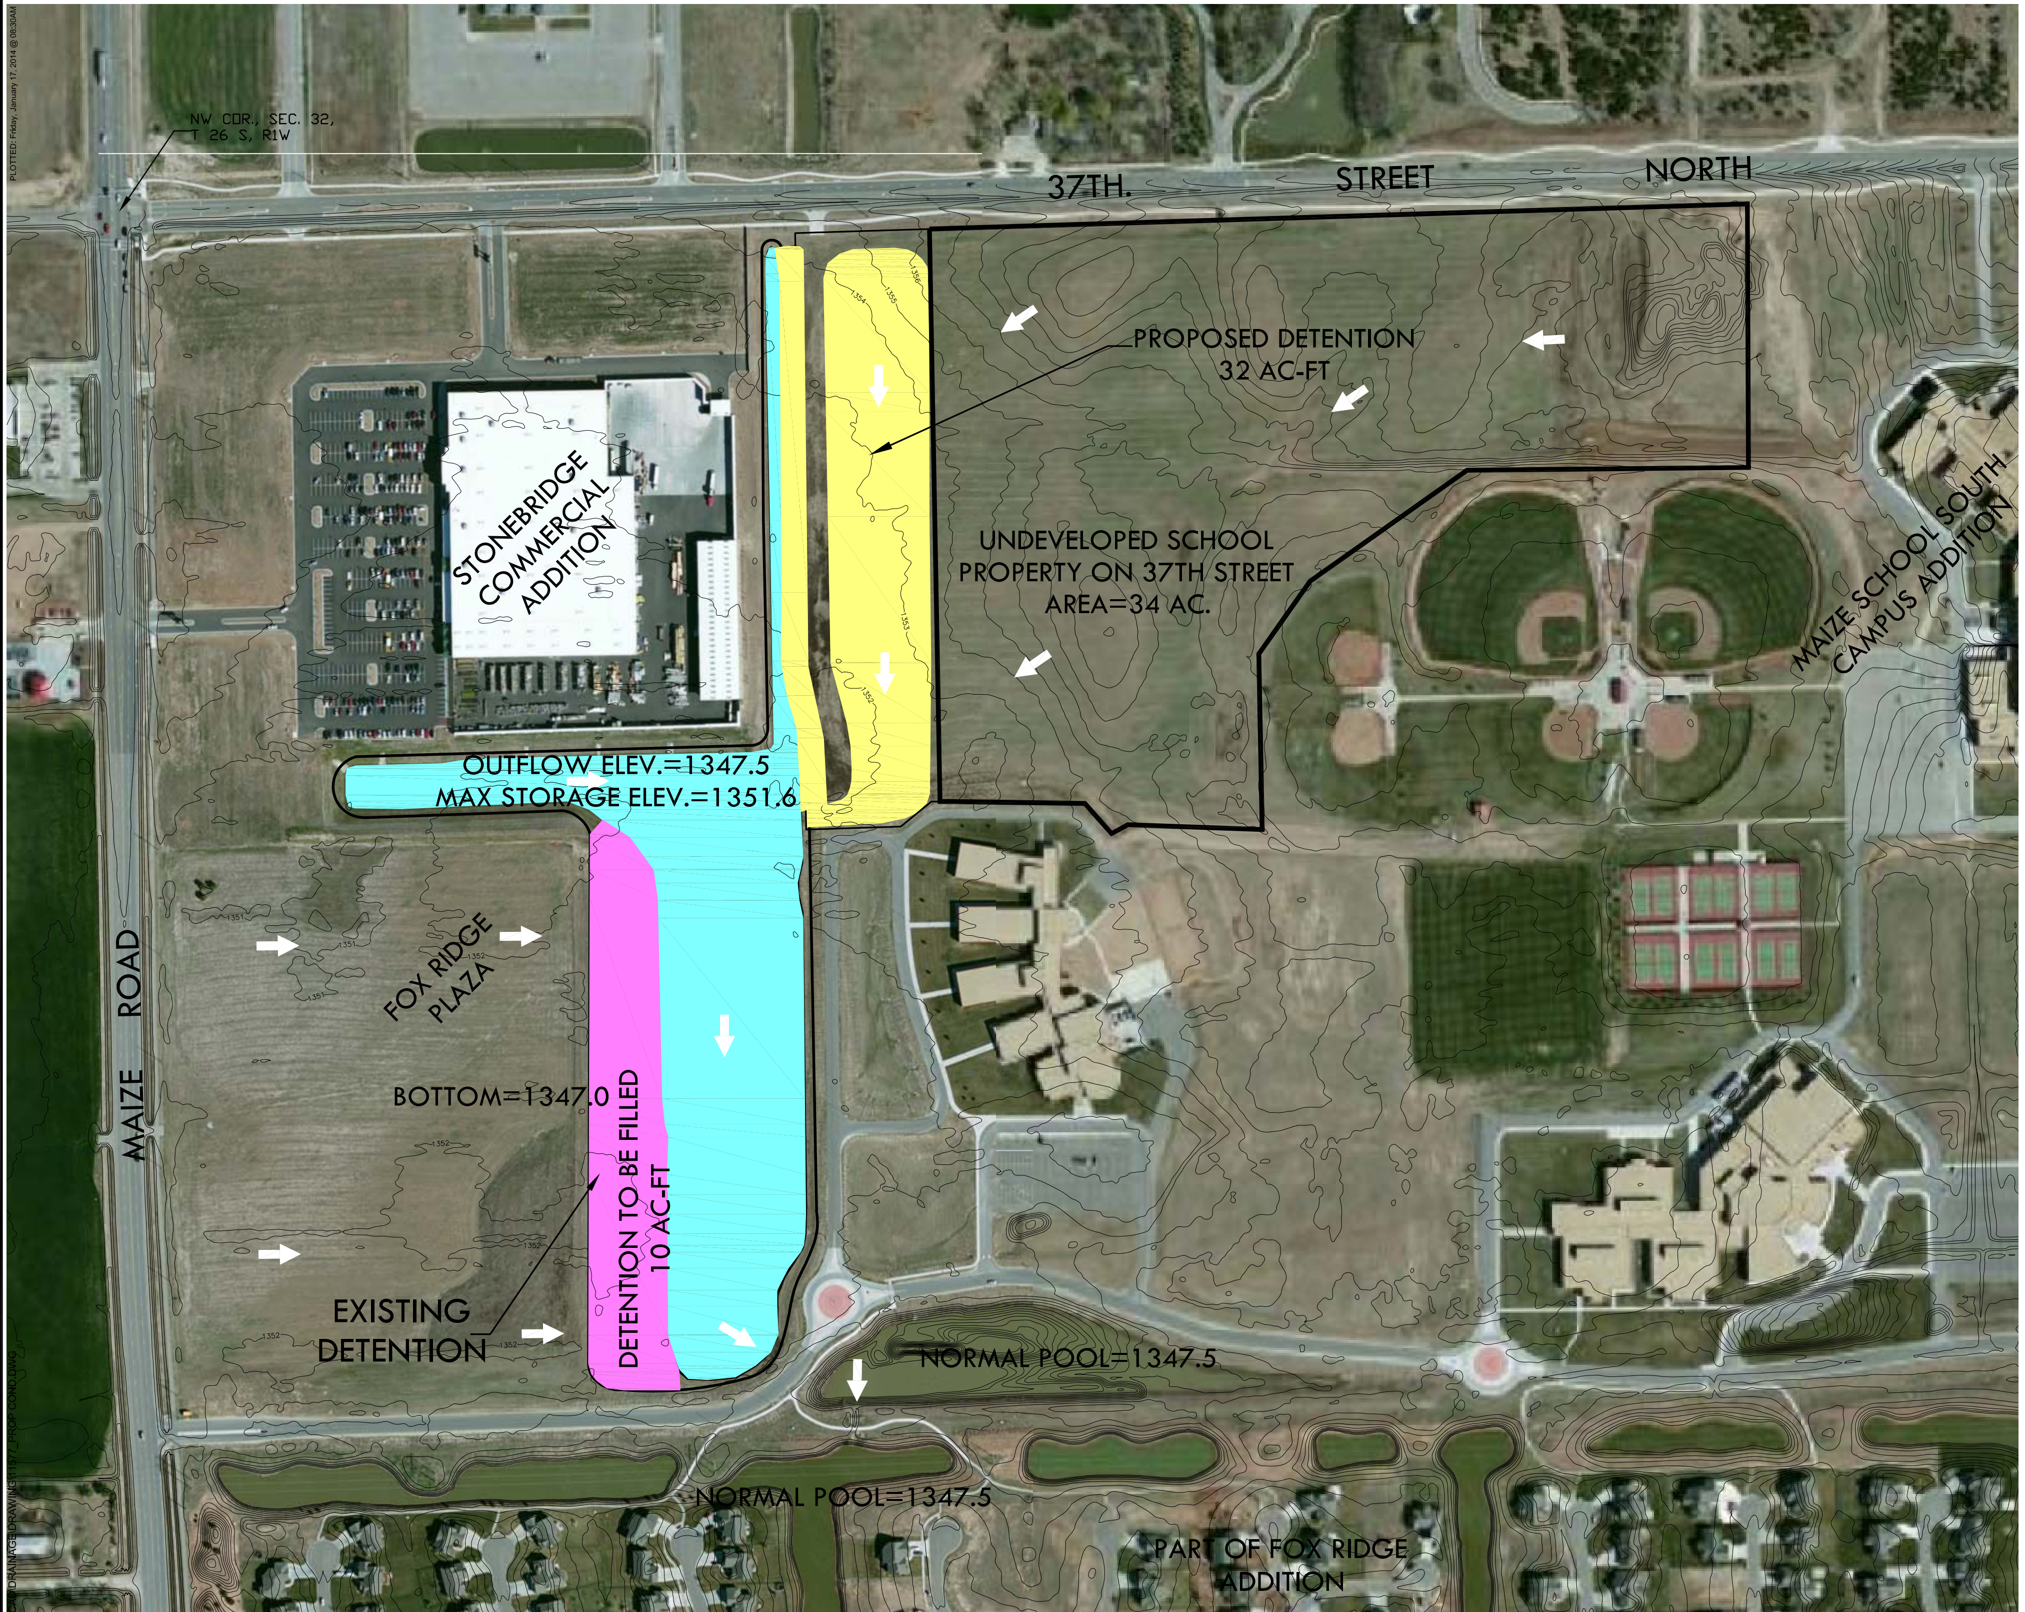
Channel Protection Volume

The channel protection is provided by the system of ponds and control structures the site drains into. The pond drains through 3-36" pipes under 34th Street into a pond on Maize School South Campus. The outlet of this pond is a riser structure on an 18" pipe that restricts smaller design storms. Since the pond providing detention on site drains to this pond, the existing outlet structure will provide downstream stabilization.

Stormwater Sewer System

The stormwater sewer system is show in the drainage and utility plan. The pipes were preliminarily sized for the 5-year design event. The pipe sizes were calculated using Hydraflow Storm Sewer, Appendix 3.5.

Appendix 3.1 - Proposed Conditions Drainage Map



DETENTION SUMMARY

FOX RIDGE PLAZA DEVELOPMENT	5* AC-FT
FOX RIDGE PLAZA COMPENSATORY	11 AC-FT
FUTURE DEVELOPMENT ON 37TH STREET	8* AC-FT
REQUIRED DETENTION	24 AC-FT

P = 1.2 Per pg. 4-43

Site Information

Area impervious	28.9	ac
Area disturbed pervious	5.1	ac
Area undisturbed		ac
Total Area	34	ac
HSG	D	
R_v =	0.85	
WQ_v =	2.87	ac - ft
Q_{wv} =	1.01	in

Eq 4-24, pg 4-43

Eq 4-25, pg 4-44

Eq 4-26, Pg 4-44

HSG = Hydrologic Soil Group

WQ_v = water quality protection volume (acre-feet)

P = rainfall depth (in)

R_v = volumetric runoff coefficient

Q_{wv} = water quality protection volume (inches)

Appendix 3.5 – Hydraflow Storm Sewer

Hydraflow Storm Sewers Extension for AutoCAD® Civil 3D® 2009 Plan

Tab 4. Floodplains

FEMA FIRM

The site is in Zone X unshaded, areas outside of the 500-year according to FIRM panel 20173C0330E effective February 2, 2007, Appendix 4.1. The nearest 100-year floodplain is approximately ¼ of a mile south of the site per LOMR Case Number 06-07-BB40P.

Although there is no mapped FEMA floodplain on site, there is floodplain on site that is connected with mapped FEMA floodplain.

Tab 5. Federal, State, and Local Permits

US Army Corps of Engineers

The site will not modify any jurisdictional streams or wetlands.

Kansas Department of Agriculture – Division of Water Resources

There are no proposed changes to a stream, floodplain, or pond with a drainage area of more than 160 acres.

FEMA

The site will not modify any FEMA floodplains.
