RE: CUP2015-04 – City CUP Administrative Adjustment to DP-146 to Parcel 1 of the Fairfield Residential Community Unit Plan; generally located at the southwest corner of 13th Street North and Broadmoor Street.

Dear Applicants:

We received and reviewed your request for an Administrative Adjustment to DP-146, the Fairfield Residential Community Unit Plan (“CUP”). We understand that you wish to reduce the separation between signs from 150 feet to 75 feet to accommodate a new sign at the main entrance on Parcel 1.

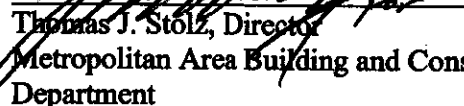

On the basis of our review, we find that adjusting the CUP in the manner stated in the above paragraph is consistent with the approved CUP and will not have an adverse effect on the CUP or adjacent properties, nor will it be a substantial deviation of the original plan.

Our signatures below indicate that the CUP shall be adjusted as stated in this letter. This CUP adjustment shall not be deemed to alter any other provisions of the CUP except as expressly stated herein. This approval is subject to the following conditions:

1. All signs shall be permitted and installed within one year.
2. The Administrative Adjustment applies only to the two signs located at the major entrance of Parcel 1, DP-146.

The “Development Application” sign should now be removed from the property. Please submit four (4) copies of the revised CUP drawing within 60 days in order for this adjustment to be considered final.

- A. TEST: After new sprinkler piping and risers are in place and connected, necessary work has been completed, and prior to the installation of sprinkler heads, control valves shall be individually opened and a full head of water used to flush out the system. After the system is thoroughly flushed, lateral valves shall be turned off. The system shall be pressure tested for 24 hours. No testing shall occur until the last solvent weld joint has had at least 24 hours to set and cure.
1. SPRINKLER HEADS shall be installed and tested for operation in accordance with design requirements under normal operating pressure. All necessary adjustments to the sprinkler equipment as required shall be made to assure efficient operation.
- 3.06 SYSTEM OPERATION AND ACCEPTANCE
- A. OPERATION/ACCEPTANCE: Operate the completed system for the Architect or Owner's Representative and the Owner's inspection for provisional acceptance at which time each sprinkler head shall be visually checked for coverage, adjustment, installation and proper performance. Valves shall be inspected for adjustment, installation and proper automatic or manual control; as built "working prints" will be checked for accuracy; clean up of the site will be checked; and general items such as controller(s) will be inspected for proper installation and operation. All loose equipment, including controller keys, and related equipment as required or as necessary for the Owner's operation of the system will be turned over after completion of the maintenance period, prior to final acceptance.
- B. INSTRUCTION: Instruct Owner's personnel or designated representative in complete operation and maintenance of the irrigation system including but not limited to the controller operation, maintenance of the systems filters and adjustment of heads.
