BENDING DIAGRAM

GENERAL NOTES:

Concrete shall be C.O.W. standard paving mix. All exposed edges shall be finished with an edging tool. Reinforcing bars shall be field bent or cut to clear pipes and inlet rings. All bars shall be #13 bars @ 150 mm spacing and shall have a minimum clearance of 38 mm unless otherwise noted. Floors of inlet shall be shaped with B sack sand mix concrete to increase hydraulic efficiency such that the inlet will be self cleaning between all inlet and/or outlet pipe(s). The contractor will be required to construct 200 mm brick masonry walls between the inlet base and top on this inlet when H=2.14 m or less; and H=1.93 m or less. When H is greater than 1.93 m and H is less than 2.14 m, the outside inlet walls below the brick stack shall be reinforced concrete construction.

Concrete tops to be installed on thin mortar cushion to insure full support along brick walls. Concrete tops may be cast in place or precast.

The ends of all pipes installed in inlets shall be cut off flush with the inside face of the inlet wall.
