PROFESSIONAL ENGINEERING CONSULTANTS

Designed by K.E.

Drawn by G.G. Mar. 72 7027

CONSTRUCTION SEQUENCE

TRAFFIC SHALL BE CARRIED THROUGH CONSTRUCTION ON BICKEL AVENUE.

CROSSROAD AND INLET PIPES WILL BE INSTALLED BEFORE THE BITUMINOUS BASE COURSE (ROAD MIX) SUB-BASE IS PLACED.

PHASE I - GRADING OF LEFT LANES

TRAFFIC IS TO BE MAINTAINED ON THE EXISTING ROADWAY AND BRIDGE.

NO CONSTRUCTION SHALL BE ACCOMPLISHED BETWEEN STA. 1155+50 AND STA. 1160+00 DURING PHASE I.

ALL GRADING LEFT OF THE PROJECT CENTERLINE BETWEEN STA. 1160+00 AND STA. 1184+92.42 SHALL BE COMPLETED AS SHOWN ON THE TYPICAL SECTION PHASE I GRADING THIS SHEET.

ALL GRADING ON HOOVER ROAD AND THE HOOVER ROAD RELOCATION WILL BE COMPLETED. TRAFFIC WILL BE CARRIED THROUGH CONSTRUCTION ON THE EXISTING HOOVER ROAD ALIGNMENT.

UPON COMPLETION OF PHASE I GRADING THE BITUMINOUS BASE COURSE (ROAD MIX) WILL BE PLACED ON THE LEFT LANES AND THE HOOVER ROAD RELOCATION AS SHOWN ON THE PLANS

TRAFFIC BETWEEN STA. 1190+39.30 AND STA. 1195+70 WILL BE ROUTED TO THE EXISTING TWO LANES RIGHT OF THE PROJECT CENTERLINE. PAVEMENT REMOVAL, GRADING AND PLACING OF BITUMINOUS BASE COURSE (ROAD MIX) SHALL BE ACCOMPLISHED ON THIS PORTION WITHOUT INTERIM DELAYS.

PHASE II - GRADING OF RIGHT LANES

TRAFFIC IS TO BE CARRIED ON THE BITUMINOUS BASE COURSE (ROAD MIX) LEFT OF CENTERLINE. IF DIRECTED BY THE ENGINEER A BITUMINOUS SEAL WILL BE PLACED ON THE BITUMINOUS BASE COURSE (ROAD MIX) BEFORE OPENING IT TO TRAFFIC. TRAFFIC WILL BE CARRIED ACROSS PHASE II CONSTRUCTION AT THE ZOO ENTRANCE STA. 1171+22.10 AND AT THE INTERSECTION WITH WINDMILL ROAD STA. 1180+51.85.

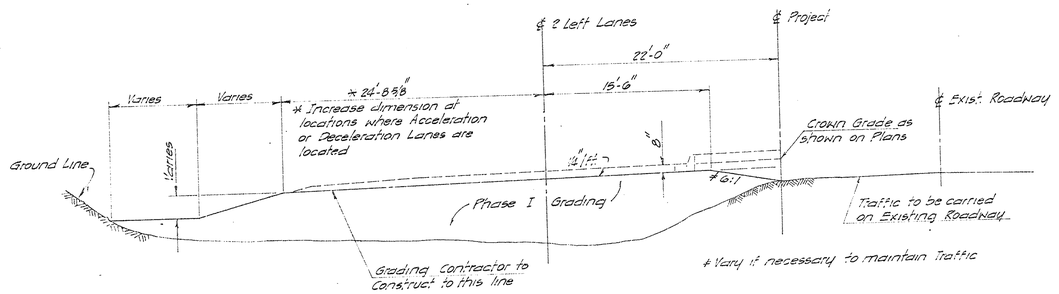
ALL GRADING BETWEEN STA. 1155+50 AND STA. 1160-00 IS TO BE COMPLETED. TRAFFIC MAY BE ROUTED ONTO THE HOOVER ROAD RELOCATION IF NECESSARY.

ALL GRADING RIGHT OF THE PROJECT CENTERLINE BETWEEN STA. 1160+00 AND STA. 1192+76 IS TO BE COMPLETED AS SHOWN ON THE TYPICAL SECTION PHASE II GRADING THIS SHEET.

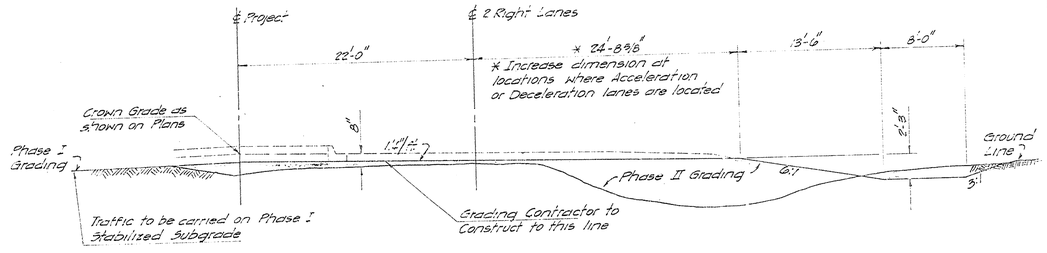
UPON COMPLETION OF PHASE II GRADING, THE BITUMINOUS BASE COURSE (ROAD MIX) WILL BE PLACED AS SHOWN ON THE PLANS.

PHASE III - SURFACING (PLANT MIX)

THE SEQUENCE OF SURFACING IS TO BE COORDINATED BETWEEN THE CONTRACTOR AND THE ENGINEER. TRAFFIC WILL BE CARRIED THROUGH CONSTRUCTION DURING PHASE III.



TYPICAL SECTION PHASE I GRADING



TYPICAL SECTION PHASE II GRADING

Part 1

GENERAL NOTES

LOADING: H520 - 44 A.A.S.H.O. SPECIFICATIONS OF 1969.

UNIT STRESS: f'c = 4,000 P.S.I., fc = 1,800 P.S.I., fs = 20,000 P.S.I.

BRIDGE EXCAVATION: ELEVATION 1307.0 SHALL DESIGNATE THE EXCAVATION BOUNDARY PLANE OF CLASS I AND CLASS II EXCAVATION. CLASS I ABOVE THE PLANE, CLASS II BELOW. SEE BRIDGE EXCAVATION SHEET FOR LIMITS OF PAY EXCAVATION.

PILES: ALL PILES SHALL BE DRIVEN TO A PENETRATION INTO ROCK OR SHALE UNLESS IN THE OPINION OF THE ENGINEER SUCH PENETRATION CANNOT BE OBTAINED WITHOUT INJURY TO THE PILE. PILES SHALL BE DRIVEN TO A MINIMUM COMPUTED BEARING VALUE OF:

ABUTMENT - 39 TONS PER PILE
PIERS - 42 TONS PER PILE

RIPRAP: THE EXISTING RIPRAP REMOVED DUE TO THE EXCAVATION SHALL BE REPLACED TO THE ORIGINAL POSITION. SEE SHEET 5 FOR DESIGN FLOODWAY CHANNEL. NEW RIPRAP SHALL BE PLACED ON THE UPSTREAM SIDE OF PIERS 3,4,5,6 AND 7. THE TOP OF THE NEW RIPRAP SHALL BE AT ELEVATION 1306.48. IT SHALL CONSIST OF 24" OF HEAVY CONCRETE RUBBLE RIPRAP, COMPARABLE IN SIZE TO THE EXISTING RIPRAP. A ROCK TOE SHALL BE CONSTRUCTED AT THE OUTER EDGE OF ALL NEW RIPRAP. SEE SHEET 5 FOR ROCK TOE DETAILS AND SHEET 7 FOR LIMITS OF NEW RIPRAP. THE CONTRACTOR MAY USE MATERIAL FROM THE EXISTING BRIDGE AS RIPRAP. THIS ITEM WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE SUBSIDIARY TO CLASS II EXCAVATION.

REMOVAL OF EXISTING STRUCTURE: THE BRIDGE CONTRACTOR SHALL REMOVE THE EXISTING MODIFIED T-BEAM SPANS AND ABUTMENTS AND PIERS. THE BRIDGE CONTRACTOR SHALL NOTIFY THE WICHITA-VALLEY CENTER FLOOD CONTROL, 104 SOUTH MAIN, WICHITA, KANSAS, PHONE 262-0811, PRIOR TO REMOVING THE EXISTING STRUCTURE. ALL CONCRETE RUBBLE, EXCEPT THAT USED BY THE BRIDGE CONTRACTOR FOR RIPRAP, SHALL BE STOCKPILED DOWNSTREAM WITHIN 1000 FEET OF THE EXISTING STRUCTURE AT A LOCATION TO BE DESIGNATED BY THE ENGINEER.

ALL EXISTING PILES, EXCEPT THOSE CONFLICTING WITH NEW CONSTRUCTION, SHALL BE CUT OFF ONE FOOT BELOW EXISTING RIPRAP. EXISTING PILES CONFLICTING WITH NEW CONSTRUCTION SHALL BE REMOVED.

TRAFFIC CONTROL: TRAFFIC WILL BE CARRIED THROUGH CONSTRUCTION ON THE EXISTING BRIDGE UNTIL THE LEFT ONE-HALF OF THE NEW BRIDGE IS COMPLETED, AT WHICH TIME TRAFFIC WILL BE DIVERTED TO THE NEW STRUCTURE. THE BRIDGE CONTRACTOR SHALL COMPLETE THE PERMANENT CURB AND METAL HANDRAIL FOR THE LEFT SIDE OF THE BRIDGE AND THE 3 FOOT SECTION OF MEDIAN AS SHOWN ON THE PLANS, BEFORE THE LEFT ONE-HALF OF THE BRIDGE IS OPENED TO TRAFFIC. SEE SHEETS NOS. 21, 22 AND 23 FOR TRAFFIC CONTROL DURING CONSTRUCTION. SEE SHEET NO. 3 FOR ADDITIONAL CONSTRUCTION SEQUENCE INFORMATION.

U.S.G.S. GAGING STATION: THE U.S.G.S. GAGING STATION, RT. STA. 1185+02 IS TO BE RELOCATED BY OTHERS.

ENGINEERING GEOLOGY: THE SOUNDINGS SHOWN ON THESE PLANS ARE TAKEN FROM NOTES OBTAINED IN THE FIELD AND REPRESENT THE BEST INFORMATION AVAILABLE TO THE SEDGWICK COUNTY ENGINEERING DEPARTMENT. THE LOGS OF THESE SOUNDINGS ARE IN THE FILES OF THE SEDGWICK COUNTY ENGINEER AND ARE AVAILABLE FOR INSPECTION BY INTERESTED AND QUALIFIED BIDDERS.

FALSEWORK: FALSEWORK SHALL BE IN PLACE IN ANY SPAN UNTIL THE CONCRETE IN THAT SPAN AND THE NEXT ADJACENT SPAN CONSTRUCTED LATEST SHALL HAVE ATTAINED ITS DESIGN STRENGTH, EXCEPT THAT FALSEWORK SHALL REMAIN IN PLACE UNDER THE ENTIRE LEFT ONE-HALF OF THE NEW BRIDGE UNTIL SUCH TIME AS THE ADJOINING RIGHT ONE-HALF SPAN QUALIFIES FOR REMOVAL OF FALSEWORK. IN LIEU OF THE ABOVE EXCEPTION THE CONTRACTOR MAY AT HIS OPTION, WHEN PILE BENTS AT NOT MORE THAN 15'-2" C. C. ARE ERECTED TO SUPPORT THE FALSEWORK, ELECT TO REMOVE THE SLAB FORMS, WHEN THE CONCRETE THEREON OTHERWISE QUALIFIES, AND RESHORE THE COMPLETED WORK AT EACH BENT. THE RESHORING SHALL REMAIN IN PLACE ON THE LEFT-HALF OF THE STRUCTURE UNTIL THE CONCRETE IN THE ADJACENT RIGHT-HALF QUALIFIES FOR REMOVAL OF FALSEWORK. WHERE THE RESHORING OPTION IS ELECTED THE CONTRACTOR'S PROPOSED SEQUENCE OF OPERATIONS SHALL BE APPROVED BY THE ENGINEER.

TEST PILES: (TWO) CONCRETE TEST PILES SHALL BE DRIVEN AT LOCATIONS SHOWN ON THE PLANS OR AS DIRECTED BY THE ENGINEER. TEST PILES SHALL REMAIN IN PLACE AS PERMANENT PILING.

GRADING FOR STAIRS: THE BRIDGE CONTRACTOR SHALL DO THE NECESSARY GRADING TO CONSTRUCT THE STAIRS ADJACENT TO THE ABUTMENTS, AND WILL BE RESPONSIBLE FOR SUPPLYING ANY NECESSARY FILL MATERIAL. THE COST OF THIS WORK SHALL BE INCLUDED IN THE PRICE BID FOR CLASS I EXCAVATION.

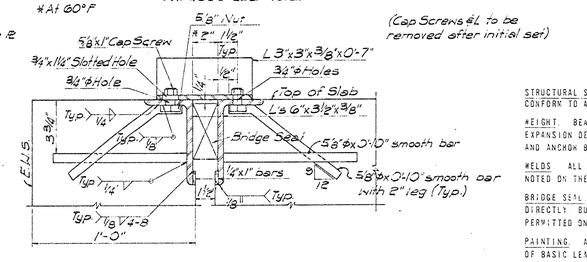
ABUTMENT BEARING DEVICES

16 Reqd. Wt. 263 Lbs. Each

Note: Bearing plates to be Fluorogold slide bearings as manufactured by the Fluorocarbon Co. or approved equal.



SECTION THRU EXPANSION DEVICE

(Cap Screws ℄ L to be removed after initial set)

GENERAL NOTES

STRUCTURAL STEEL: ALL PARTS OF BEARING AND EXPANSION DEVICES SHALL CONFORM TO ASTM DESIGNATION A36.

WEIGHT: BEARING DEVICES INCLUDE THE WEIGHT OF ALL PLATES, BOLTS AND NUTS. EXPANSION DEVICES INCLUDE THE WEIGHT OF ALL ANGLES, PLATES, KEEPER BARS AND ANCHOR BARS.

WELDS: ALL WELDS SHALL BE 5/16" CONTINUOUS FILLET WELDS UNLESS OTHERWISE NOTED ON THE PLANS.

BRIDGE SEAL: THE PREFORMED NEOPRENE BRIDGE SEAL SHALL NOT BE PAID FOR DIRECTLY, BUT SHALL BE FURNISHED AS A SUBSIDIARY ITEM. SPLICING WILL BE PERMITTED ONLY AT LOCATIONS SHOWN ON THE PLANS.

PAINTING: ALL BEARING AND EXPANSION DEVICES SHALL RECEIVE ONE SHOP COAT OF BASIC LEAD SILICO-CHROMATE PRIMER. BEARING DEVICES SHALL RECEIVE 2 SHOP COATS OF BASIC LEAD SILICO-CHROMATE DARK GREEN FINISH COAT. ALL EXPOSED AREAS OF EXPANSION DEVICES AFTER INSTALLATION OF THE NEOPRENE SEAL SHALL RECEIVE 2 COATS OF BASIC LEAD SILICO-CHROMATE DARK GREEN FINISH COAT.

(GALVANIZED)

GENERAL NOTES:

THE HORIZONTAL MEMBERS OF THE RAIL AND THE POSTS SHALL BE STEEL HOLLOW STRUCTURAL TUBING. ALL PLATES SHALL CONFORM TO A.S.T.M. DESIGNATION A36.

ALL PARTS OF THE RAIL, POSTS, AND BASE PLATES SHALL BE GALVANIZED AFTER FABRICATION. ANCHOR BOLTS, NU S AND WASHERS AND STEEL SHIMS SHALL BE GALVANIZED. GALVANIZING SHALL CONFORM TO LATEST REQUIREMENTS OF A.S.T.M. A-123.
RAIL POSTS SHALL BE PERPENDICULAR TO TOP OF CURB. SHIMS MAY BE USED BETWEEN CONCRETE AND BASE PLATE OF POSTS.

RAIL SHALL BE FABRICATED IN LENGTHS TO INCLUDE A MINIMUM OF FOUR OR A MAXIMUM OF SIX PANELS. HORIZONTAL RAIL MEMBER SHALL BE ATTACHED TO AT LEAST FOUR POSTS.

ALL ANCHOR BOLTS AND NUTS SHALL CONFORM TO SUBSECTION U15-1; WASHERS SHALL CONFORM TO SUBSECTION U15-4 OF THE 1966 STANDARD SPECIFICATIONS.

ALL WELDS ON POSTS AND RAIL SHALL BE SAND BLASTED WITHIN 4 TO 6 HOURS PRIOR TO GALVANIZING.

THE BRIDGE CONTRACTOR SHALL CLEAN ALL EXPOSED GALVANIZED SURFACES WITH SOLVENT PRIOR TO APPLYING ONE COAT OF ZINC DUST-ZINC OXIDE PRIMER AND TWO COATS OF BASIC LEAD SILICO-CHROMATE DARK GREEN FINISH COAT.

CONSTRUCTION JOINTS IN CURBS SHALL BE DISCONTINUOUS THROUGH DRAIN OPENINGS. CURBS MAY BE BUILT AFTER REMOVAL OF FALSEWORK.

GENERAL NOTES

STRUCTURAL STEEL: THE HORIZONTAL MEMBERS AND POSTS (BRIDGE SECTION) OF THE METAL HANDRAIL SPECIAL SHALL BE STEEL HOLLOW STRUCTURAL TUBING. THE HORIZONTAL MEMBERS AND POSTS OF THE PIPE HAND RAIL SHALL BE SEAMLESS STEEL PIPE. ALL POSTS (APPROACH SECTION) AND OFFSET BLOCKS OF THE METAL HANDRAIL SPECIAL, AND ALL PLATES AND ANGLES SHALL CONFORM TO ASTM DESIGNATION A36.

FABRICATION: ALL METAL HANDRAIL SHALL BE SHOP CURVED. THE PIPE HANDRAIL SHALL BE FABRICATED TO THE SHAPE AND DIMENSIONS SHOWN ON THE PLANS. ALL RAIL EXCEPT ON STAIRWAYS SHALL BE FABRICATED IN LENGTHS TO INCLUDE A MINIMUM OF FOUR AND A MAXIMUM OF SIX PANELS. WELD ALL JOINTS OF THE PIPE HANDRAIL UNLESS NOTED OTHERWISE, AND GRIND SMOOTH ALL EXPOSED WELDS. ALL WELDS ON METAL HANDRAIL SPECIAL SHALL BE SAND BLASTED WITHIN 4 TO 6 HOURS PRIOR TO GALVANIZING. ALL PARTS OF THE METAL HANDRAIL, PIPE HANDRAIL, POSTS, BLOCKS AND BASE PLATES SHALL BE GALVANIZED AFTER FABRICATION. GALVANIZING SHALL CONFORM TO THE LATEST REQUIREMENTS OF ASTM A-123.

ERECTION: THE METAL HANDRAIL POSTS (BRIDGE SECTION) SHALL BE PERPENDICULAR TO THE CONCRETE PADS. SHIMS MAY BE USED BETWEEN CONCRETE AND BASE PLATE OF POSTS. METAL HANDRAIL POSTS (APPROACH SECTION) MAY BE SET BY DIGGING OR BY DRIVING. EXCAVATION OF ALL CLASSES, INCLUDING ROCK, SHALE AND OTHER MATERIAL, REGARDLESS OF THE ELEVATIONS ENCOUNTERED, REQUIRED FOR THE ERECTION OF THE POST, SHALL BE CONSIDERED AS SUBSIDIARY TO THE VARIOUS BID ITEMS FOR WHICH PAYMENT IS MADE. THE PIPE HANDRAIL SHALL BE INSTALLED BY INSERTING INTO THE CONCRETE AT THE TIME IT IS POURED A 3" DIAMETER STANDARD WEIGHT GALVANIZED SLEEVE. THE PIPE HANDRAIL POST SHALL BE PLACED INTO THE SLEEVE AND THE ANNULAR SPACE FILLED WITH FERROLITH G QUICK-SETTING HYDRAULIC CEMENT OR APPROVED EQUAL.

PAINTING: AFTER ERECTION THE BRIDGE CONTRACTOR SHALL CLEAN ALL EXPOSED GALVANIZED SURFACES WITH SOLVENT PRIOR TO APPLYING ONE COAT OF ZINC DUST-ZINC OXIDE PRIMER AND TWO COATS OF BASIC LEAD SILICO-CHROMATE DARK GREEN FINISH COAT.

PAYMENT FOR PIPE HANDRAIL: THE LUMP SUM PAYMENT FOR PIPE HANDRAIL INCLUDES THE FURNISHING AND INSTALLATION OF ALL GALVANIZED PIPE, PIPE SLEEVES, PLATES, BRACKETS, BOLTS, WASHERS AND NUTS AS DETAILED ON THE PLANS.

CONSTRUCTION JOINT W/KEY

CONTROL JOINT
(Max. Spacing 25'-0")

GENERAL NOTES

CONCRETE: CLASS AAA (AE) SHALL BE USED IN ALL WALLS RETAINING WALLS STEPS AND WALKWAYS. BEVEL ALL EXPOSED EDGES WITH A 3/4" TRIANGULAR MOULDING UNLESS OTHERWISE NOTED.

REINFORCING STEEL: ALL REINFORCING STEEL SHALL CONFORM TO ASTM SPECIFICATION A615 GRADE 40. ALL DIMENSIONS RELATIVE TO REINFORCING STEEL ARE TO THE CENTERLINE OF BAR UNLESS OTHERWISE NOTED.

UNIT STRESSES: f'c = 4,000 P.S.I., fc = 1,600 P.S.I. fs = 20 000 P.S.I.

CONTRACTION JOINTS IN WALKWAYS. CONTRACTION JOINTS SHALL BE LOCATED AT A MAXIMUM OF 5 FEET APART. THEY SHALL BE FORMED BY PLACING A METAL TEMPLATE HAVING A MINIMUM THICKNESS OF ONE-EIGHTH (1/8) INCH INTO THE CONCRETE FOR AT LEAST ONE-THIRD (1/3) OF THE DEPTH OR BY CUTTING ENTIRELY THROUGH THE FRESH CONCRETE WITH A SPADE OR TROWEL.

EXPANSION JOINTS IN WALKWAYS: EXPANSION JOINTS SHALL BE 1/4" THICK LOCATED NO FURTHER APART THAN 20 FEET AND SHALL EXTEND THE FULL THICKNESS THROUGH THE SLAB. ONE-FOURTH (1/4) INCH TYPE B PREMOLDED JOINT FILLER SHALL BE INSTALLED IN THESE JOINTS. EXPANSION JOINTS SHALL BE PLACED BETWEEN ALL WALKWAY SLABS AND ANY VERTICAL SURFACE.

CONSTRUCTION AND CONTROL JOINTS IN RETAINING WALLS: A KEYED CONSTRUCTION JOINT SHALL BE PLACED IN EACH RETAINING WALL AT THE CENTERLINE OF THE BRIDGE. CONTROL JOINTS SHALL BE PLACED IN EACH RETAINING WALL AT A MAXIMUM OF 25 FEET.

CONSTRUCTION SEQUENCE: FOR EACH ONE-HALF OF THE BRIDGE THE CONTRACTOR SHALL FIRST DRIVE THE ABUTMENT PILES, CONSTRUCT THE RETAINING WALLS AND OUTSIDE STAIR WALLS BEFORE CONSTRUCTING THE ABUTMENT.

GENERAL NOTES

1. Specifications.
Standard Specifications for State Road and Bridge Construction as currently used by the State Highway Commission of Kansas (Ed. 1966).

2. DELETED

3. Concrete.
All concrete for Precast and Cast-in-place shall be Class A Concrete. fc' = 3,000 p.s.i.. See Article G1-7(a) Standard Spec's.
Concrete for Prestressed Concrete piles shall be Class AAA concrete. fc' = 4,000 p.s.i.. See Article G1-7(b) Standard Spec's.

4. Reinforcement
Reinforcing bars shall be new billet steel of intermediate grade without exception. Hoops and spirals may be either plain or deformed bars.

5. Precast Piles.
Precast piles shall conform to the requirements of Article G1-7(a). Standard Specifications.

6. Cast-in-Place Shells.
Steel Shells for Cast-in-place Concrete Piles shall conform to the requirements of Section U-7. Standard Specifications.
All piles driven without mandrel use gages or thicknesses shown above, except fluted pile use No.9 gage minimum. Piles driven with mandrel shall be of sufficient strength and thickness to withstand driving without injury and to resist harmful distortion and/or buckling due to soil pressure after the mandrel is removed.
Improperly driven, broken or otherwise defective shells shall be removed and replaced or otherwise corrected to the satisfaction of the Engineer by removal and replacement, or the driving of an additional pile at no extra cost.
The Contractor shall maintain on the job at all times prior to and during the filling of the shells, a light suitable for visual inspection of the pile.

7. Steel Pile
Steel Pile shall conform to requirements of Subsection U5-8 Standard Specifications.

8. Pile Points
Pile points shall conform to the dimensions shown and requirements of Article U7-2(c) Standard Specifications. Pile points shall be mill welded to pile.

9. Welding
All field welding shall meet the requirements of Subsection G1-6 Standard Specifications.

10. Paint
All paint shall comply with Subsection Q3-8 Standard Specifications. Or as specified on the plans.

11. Test Piles.
Test Piles shall be driven where called for on the Bridge plans. All test piles shall be located so that they will become part of the Bridge Pile system.

12. Splices.
Splices for Steel Piles and Shell Piling shall be in accordance with details shown on this sheet and shall comply with Subsection G1-6 Std. Spec's.
Precast Concrete Pile splices shall comply with Subarticle G1-7(d)(1). Std. Specifications
Prestressed Concrete Pile splices shall be made in accordance with the manufacturers recommendations, subject to the approval of the Engineer.

13. Driving Formula.
Driving Formula shall conform to Subarticle G1-4(d)(3).

14. Mill Test Reports
Steel Piles test reports shall comply with Art. U5-8(c) Standard Specifications.
Steel Shells test reports for cast-in-place piles shall comply with Subsection U7-4 Std. Spec's.

15. Payment
Payment for all piles shall comply with Subsec. G1-9. Std. Specifications.

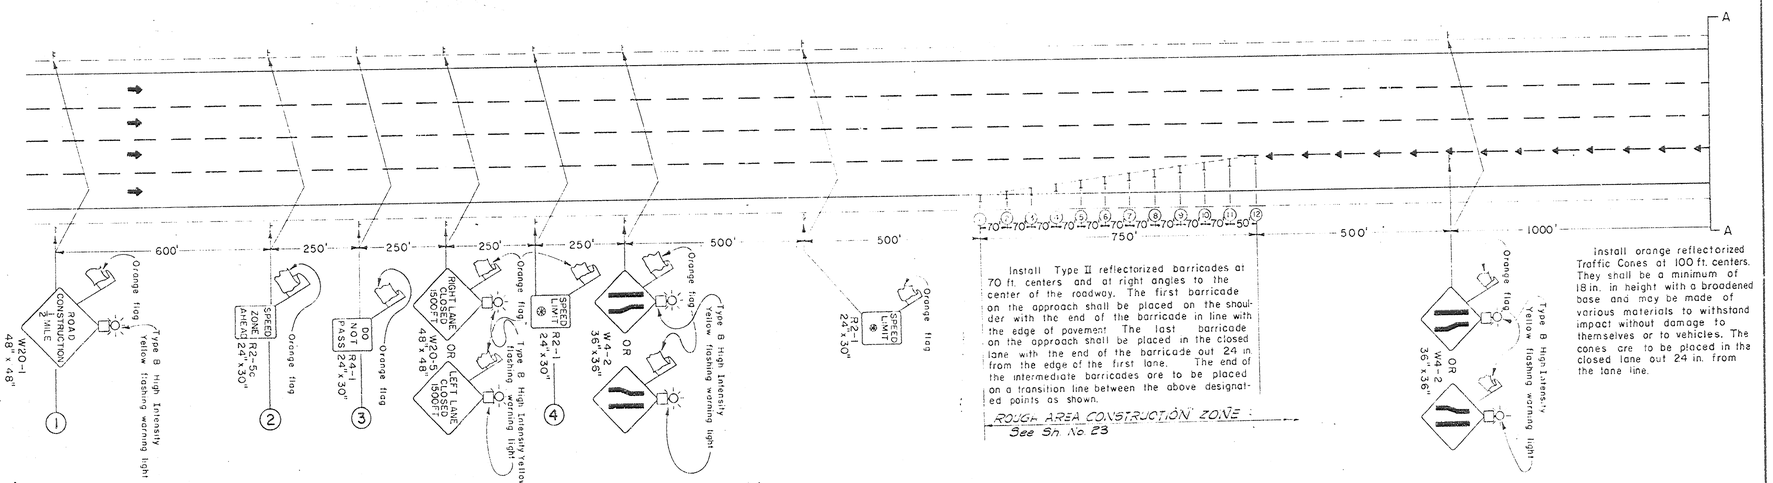
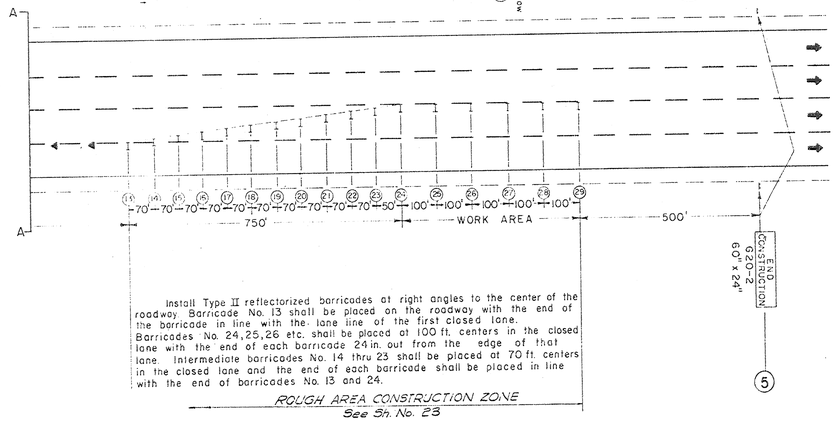
Part 1

TRAFFIC CONTROL SIGNING *

FOR TRAFFIC MOVEMENT THROUGH CONSTRUCTION
ON A MULTI-LANE HIGHWAY



Install Type II reflectorized barricades at 70 ft. centers and at right angles to the center of the roadway. The first barricade on the approach shall be placed on the shoulder with the end of the barricade in line with the edge of pavement. The last barricade on the approach shall be placed in the closed lane with the end of the barricade out 24 in. from the edge of the first lane. The end of the intermediate barricades are to be placed on a transition line between the above designated points as shown.



Install Type II reflectorized barricades at right angles to the center of the roadway. Barricade No. 13 shall be placed on the roadway with the end of the barricade in line with the lane line of the first closed lane. Barricades No. 24, 25, 26 etc. shall be placed at 100 ft. centers in the closed lane with the end of each barricade 24 in. out from the edge of that lane. Intermediate barricades No. 14 thru 23 shall be placed at 70 ft. centers in the closed lane and the end of each barricade shall be placed in line with the end of barricades No. 13 and 24.

ROUGH AREA CONSTRUCTION ZONE
See Sh. No. 23

NOTE

All traffic control devices shall comply to (1) Section A7 of the 1966 Edition of the Standard Specification and to any Supplemental Specification to this section and (2) the Manual on Uniform Traffic Control Devices For Streets and Highways dated November 13, 1970.

Lights placed on advance warning signs shall be Type B High Intensity with a 7" minimum diameter lens, regulated to flash 55 to 75 times per minute. The flash duration shall not be less than 8% of time.

Each barricade shall have one yellow steady burning warning light on top of each barricade at night. One orange flag shall be in place on the end of each barricade day and night.

(S) Posted speed limit to be determined by the ENGINEER.

All existing permanent speed limit signs are to be covered with an opaque waterproof material or removed as directed by the ENGINEER.

Due to existing conditions the ENGINEER may require a decrease in the spacing between barricades, cones and or signs.

All signs and barricades shall be reflectorized.

When no work is in progress all equipment shall be removed from the recovery area and placed or parked at the extreme limits of the right of way or at sites approved by the ENGINEER.

Temporary traffic control signs when not in use shall be either covered with an opaque weatherproof material or removed from the recovery area as approved by the ENGINEER.

* See Sh. No 23 for construction traffic control devices and locations through ROUGH AREA CONSTRUCTION ZONE.
