GENERAL NOTES
All easements, channel changes, borrow-pit locations and R/W for construction of this project to be furnished by SEDGWICK COUNTY.
All encroachments, such as fences, telegraph, telephone and power lines, shall be moved beyond the limits of construction by owners or SEDGWICK COUNTY.
In the interest of public safety, all gas, gasoline, oil and water lines shall be moved beyond the limits of the roadbed unless special provision for their retention has been noted.
Operational devices for any and all lines, which are permitted to remain in place, shall be adjusted to conform with lines and grade of proposed improvement.
Grading and surfacing is to be done by others and is not to be considered a part of the Contract.

Estimated flow 96,500
Estimated Velocity 8.08'/Sec.

GENERAL NOTES

Design: According to AASHO Specifications, Edition of 1949 H20 44 Loading; f_s = 20,000 psi; f'_c = 1,000 psi.

Soundings: Taken by SEDGWICK COUNTY with ¾" jet.

Filing: Concrete piling to be driven to a computed resistance of 128 tons per pile.

Concrete: Use class A-985 concrete throughout. Bevel all exposed edges with a ¾" triangular molding.

Forms: Contractor shall use preformed metal forms owned by SEDGWICK COUNTY.

Embankment: To be constructed by SEDGWICK COUNTY or others. No earthwork is to be considered a part of this project except at pier locations in channelway.

GENERAL CONSTRUCTION NOTES

Timber cribbing at centerline of each span on this project will be required.

Two sets of short forms and five sets of long forms are available for these projects. Since the concrete in a full span ahead of any forms to be removed must have attained its design strength before removal of these forms, it is suggested that high early strength cement be used.

Forms for these projects shall be picked up by Contractor at the SEDGWICK COUNTY YARDS, 1015 Stillwell, Wichita, and returned to this location unless otherwise instructed by the Engineer. (See "Special Provisions in Specifications & Proposal Booklet.)

The wearing surface and all other exposed surfaces of wings, caps, abutments and piling shall be cured and protected in accordance with Section 5048 of the Standard Specifications for State Road & Bridge Construction, Edition of 1951. As an alternate, a paraffin base curing compound applied immediately after finishing of concrete, and covered with dry burlap, or any suitable material satisfactory to the Engineer in charge, for a minimum of 72 hours may be used.

Since the speed and simplicity of these projects will be greatly increased if construction is well underway before the waterway unit levees are constructed, work on forming of piling must start within two weeks and pile driving must start within three weeks after the contract is let. A trench 5'-0 x 28' to be excavated before setting piling and backfilled before any farm work for caps proceeds at each pier location in channelway. Excavation and back filling not to be paid for directly, but shall be included in the unit price bid for concrete piling.

GENERAL NOTES

Design: Designed for H-20-44 loading AASHO specifications f_s = 20,000 psi, fc = 1,000 psi

Soundings: To be taken by Sedgwick County

Piling: Concrete piling to be driven to a Calculated resistance of 28 ton

~~Old Struct: To be removed by Sedgwick County~~

Concrete: Class A (AE) concrete used throughout. Bevel all exposed edges with a 3/4" Δ molding unless otherwise noted. Forms shall be preformed steel "pans" used as directed by the Engineer in charge

Guardrail: To be of standard barrier beam or concrete as shown on Construction Layout. Concrete rail to be constructed after the removal of deck forms

~~Note: PA bars to be placed immediately after slab screeding~~

General Notes

Design: According to AASHO Specifications. 1949 Edition fs=12,000 psi fc.=1,000 psi

Concrete: Use class A throughout if Piling are to be encased or otherwise protected. Use class A(AE) if piling are to form open bent, unless otherwise noted.

Reinforcing: All dimensions are to center of bars unless otherwise noted.

Jet Pipe: Standard pipe of Dimensions shown unless otherwise approved by Engineer.

Curing: Piling shall be left in forms or otherwise properly cured for at least 7 days. Piling shall not be moved until concrete has attained its design Strength or a minimum of 4 weeks after casting.

Payment: The cost of material and labor used for casting and driving of piles shall be included in the unit bid for concrete piles.

Handling: Piling shall only be lifted by handling hooks or by rigging within 18" of hook location.

Note: Concrete at end of piles shall be removed to expose reinforcing as stated elsewhere on plans. The length for payment of piles shall be as stated in sect. 59.40 of the Standard specifications of Kansas, 1951 Edition.

Scale 1"=10'-0"

D.A. - 30 Square Miles C - 0.25
Waterway provided 414 sq ft

GENERAL NOTES

Design: According to AASHO Specifications Edition of 1949 H20-44 Loading, fs=20,000 psi, fc=1,000 psi.
Soundings Taken by Sedgwick County with ¾" jet.
Piling: Concrete Piling to be driven to a computed resistance of 28 tons per pile.
Concrete: Use Class A(AE) concrete throuout. Bevel all exposed edges with a ¾" triangular moulding.
Forms: Contractor shall use prefabricated metal forms owned by SEDGWICK COUNTY.
Embankment: To be constructed by SEDGWICK COUNTY or others. No earthwork is to be considered a part of this project except at pier and abutment locations-the cost of which is to be included in the unit price bid for piling.

GENERAL CONSTRUCTION NOTES

Timber cribbing at the centerline of each span on this project will be required.
Two sets of short forms and five sets of long forms are available for these projects. Since the concrete in a full span ahead of any forms to be removed must have attained 1/3 design strength before removal of these forms it is suggested that high early strength concrete be used.
Forms for these projects shall be picked up by the contractor at the SEDGWICK COUNTY YARDS, 701 E. Stillwell, Wichita, and returned to this location unless otherwise instructed by the Engineer. (See "Special Provisions" in Specifications and Proposals Booklet.)
The wearing surface and all other exposed surfaces of wings, caps, abutments, and piling shall be cured and protected in accordance with Sec. 2049 of the Standard Specifications for State Road & Bridge Construction, Edition of 1951. As an alternate, a paraffin base curing compound applied immediately after finishing of concrete, and covered with dry burlap, or any suitable material satisfactory to the Engineer in charge, for a minimum of 72 hours may be used.

GENERAL NOTES

Design: Designed for H-20-44 loading AASHO specifications fs 20,000 psi, fc 1,000 psi
Soundings: To be taken by Sedgwick County
Piling: Concrete piling to be driven to a calculated resistance of 28 ton
Old Struct: To be removed by Sedgwick County
Concrete: Class A(AE) concrete used throughout Bevel all exposed edges with a 3/4" Δ moulding unless otherwise noted Forms shall be preformed steel pans used as directed by the Engineer in charge
Guardrail: To be of standard barrier beam or concrete as shown on Construction Layout. Concrete rail to be constructed after the removal of deck forms
