

F.H.W.A. REGION NO.	STATE	PROJECT NO.	YEAR	SHEET NO.	TOTAL SHEETS
7	KANSAS	54-87 K-8258-02	2003	2	76

GENERAL NOTES

1. The field survey information shown on the plans represent the existing topographic conditions as best as could be determined. At locations where the new construction is to match existing features, it may require field adjustments of transition lengths and profile grades.
2. It shall be the Contractor's responsibility to coordinate with the utility owner to locate and flag all underground utilities prior to excavation to avoid damaging the utilities. All KDOT/City owned utilities are to be located by the Contractor. The information shown in these plans concerning type and location of underground utilities is not guaranteed to be accurate or all inclusive. The Contractor is responsible for making his/her own determinations as to the type and location of underground utilities as may be necessary to avoid damage thereto.
3. The geological information shown on these plans is from studies made in the field and represents the best information available to the Kansas Department Of Transportation and the City.
4. All borrow to be obtained from areas provided by the Contractor shall be approved by the Engineer, both as to suitability of material and site location. Locations which, in the opinion of the Engineer, contain unsuitable material or will leave unsightly appearance on the project will not be approved.
5. Excavation shown to be wasted shall be wasted on sites provided by the Contractor. These sites shall be approved by the Engineer as to suitability, appearance, and site location. Locations that, in the opinion of the Engineer, will leave an unsightly appearance will not be approved.
6. All work necessary to waste material in a satisfactory manner will be subsidiary to other grading items. All waste material shall have a minimum of 600 mm soil mantle cover.
7. Embankment and excavation for the construction and eradication of the detour crossovers and reconstructed shoulders have been included in the earthwork quantities.
8. Connection of existing storm sewer pipe to new structures or existing structures to new pipe shall be considered subsidiary to the storm sewer bid items.
9. Saw cutting of pavement shall not be paid for directly, but shall be considered subsidiary to other bid items on the project.

10. The bid item "Clearing and Grubbing" shall include removal of all grass and other vegetation within the limits of construction and the right of way limits. Exceptional trees which do not interfere with the construction will be saved as directed by the Engineer. No burning will be allowed on the project.
11. The top 150 mm of all areas as designated on the plans shall be constructed of select soil material and construction requirements shall meet the KDOT "Standard Specification For State Road And Bridge Construction" (1990 Edition) Section 214.02 and 214.03. Select soil material will not be allowed from areas with existing Bermuda grass. Select soil material will not be paid for directly but will be included in the common excavation quantities.
12. All existing signs, sign trusses, guard rails, etc. to be removed as necessary for construction and reset as needed after work is completed.
13. High ground water may be encountered during storm sewer and RCB construction which may require dewatering. Dewatering shall not be paid for directly, but shall be subsidiary to other storm sewer and RCB bid items.
14. Temporary shoring and/or bracing of excavation slopes shall be provided as necessary during construction.
15. There are no superelevated curves in this project.
16. The existing sanitary sewer service at Gypsum Creek shall be maintained at all times.
